TEMPORARY CHANGE TO UNTHROTTLED MODE FOR NEW EDM AND FXM DATA FEEDS VIA JSE INTERNATIONAL ACCESS POINT (IAP)

The JSE needs to temporarily upscale the current new Level 2 (full depth) MITCH EDM and FXM data feeds (which are not yet in production mode) to unthrottled mode to assist some clients with their ITaC testing and go-live readiness.

It is envisaged for the two new data feeds to be in unthrottled mode until the end of February 2019. The changes will come into effect from Wednesday, 23 January 2019.

Note that this is a temporary change and the two data feeds will revert to throttled mode in preparation for ITaC go-live which is presently planned for Monday, 8 April 2019.

This communication thus serves to notify you of the change and to make sure that your systems cater for the temporary unthrottled data flow during the temporary period.
