Appendix

Illustrative example of a reporting accountant’s unqualified report on the pro forma financial information
PREFACE

The South African Institute of Chartered Accountants (SAICA) has developed this guide, in consultation with the JSE Limited (JSE), primarily to assist directors in preparing pro forma financial information, as well as to assist reporting accountants with reporting on such pro forma financial information.

The JSE has welcomed this initiative of SAICA to develop guidance for directors and reporting accountants in an important area of listed company reporting.

Although Audit and Accounting Guides do not have the authority of South African Statements of Generally Accepted Accounting Practice and International Standards on Auditing, in the event of significant deviation from the guidance given, and should a member’s actions be questioned, the member may be required to demonstrate that such deviation was justified.

Throughout this guide, when reference is made to the reporting framework, it is made to International Financial Reporting Standards (IFRS) and not South African Statements of Generally Accepted Accounting Practice due to the fact that the JSE calls for compliance with IFRS for all financial periods commencing on or after 1 January 2005. If an issuer has not yet converted to IFRS, this guide should be read in the context of the appropriate South African Statements of Generally Accepted Accounting Practice.
Introduction

The objective of this guide is to:

- set out overall considerations for the preparation and presentation of pro forma financial information to be included in a prospectus, pre-listing statement, circular or announcement,
- provide guidance on the structure and the content of pro forma financial information,
- provide guidance on the reporting accountant’s responsibilities when engaged to report on pro forma financial information, and
- provide guidance on the form and content of the reporting accountant’s report.

A prospectus, pre-listing statement, circular or announcement contains financial information, prepared in accordance with the JSE Listings Requirements, the Companies Act and the guidance provided in the Revised Guide on Forecasts. The financial information includes:

- the report of historical financial information,
- pro forma financial information, and
- the forecast.

A prospectus, pre-listing statement, circular or announcement also contains non-financial information as required in terms of the JSE Listings Requirements and the Companies Act.

The reporting accountant’s report on the historical financial information and forecasts is dealt with in the related International Standard on Auditing and the Revised Guide on Forecasts respectively.

It should be noted that the pro forma financial information and/or the forecast should be given no greater prominence in the prospectus, pre-listing statement or circular than the report of historical financial information. This is likely to be of particular relevance in considering the relative prominence of information presented in financial highlights and summaries extracted from the report of historical financial information and pro forma financial information included in a prospectus, pre-listing statement or circular.
Responsibility

.06 The pro forma financial information is to state that it is the responsibility of the directors of the issuer.

.07 The responsibility for preparing and presenting the pro forma financial information and the completeness and accuracy of the pro forma financial information to be included in a prospectus, pre-listing statement, circular or announcement is that of the directors of the company. The reporting accountant’s report on the pro forma financial information does not relieve the directors of their responsibilities.

.08 Despite the prevalence of pro forma financial information in the circumstances described in this guide, it is important that directors ensure that the information is not misleading. The JSE should be consulted if the directors are of the view that the pro forma information is presenting a misleading picture to shareholders.

.09 The reporting accountant obtains evidence that the directors of the company acknowledge their responsibility for the pro forma financial information and the completeness and accuracy thereof. Similarly other parties involved in the prospectus, pre-listing statement or circular may need to acknowledge their responsibility for pro forma financial information to be included in the prospectus, pre-listing statement or circular. The acknowledgement is usually in writing, and could be in the form of board minutes and letters of representation.

Definitions

.10 The following terms are used in this guide with the meanings specified:

An announcement is any announcement required by the JSE that includes a report of historical financial information, pro forma financial information and/or a forecast.

Business undertaking is the shares or other interest in, or all, or part of the business assets of, a company, body corporate, partnership or other business enterprise.

The Companies Act is the South African Companies Act No 61 of 1973, as amended.

A corporate action is any action that affects the holders of securities in terms of entitlements or notifications of meetings, any section 9 or 10
transaction as defined by the JSE Listings Requirements, or any issue of securities.

Financial information is the report of historic financial information, pro forma financial information and/or forecasts.

An issuer is any company issuing a prospectus, pre-listing statement, circular or announcement.

A circular is any circular required by the JSE that includes a report of historical financial information, pro forma financial information and/or forecasts.

Net asset value is the value of the total assets (non-current assets plus current assets) minus total liabilities (non-current liabilities plus current liabilities). Assets include financial assets and liabilities include financial liabilities. The classifications used for reporting purposes should not be altered when computing the above values, for example, if preference shares are classified as equity for financial purposes, they should remain as such for the purpose of the above definition.

Net tangible asset value is the net asset value less the value of goodwill and other intangible assets. Deferred taxation is, in terms of International Financial Reporting Standards, not an intangible asset.

A pre-listing statement is a circular that includes listing particulars as set out in section 6 of the JSE Listings Requirements.

A prospectus is any prospectus, notice, circular, advertisement, or other invitation offering any shares of a company to the public.

For purposes of this guide a report of historical financial information is a report of historical financial information to be included in a prospectus, pre-listing statement or circular.

Reporting accountant is the person or firm engaged to report on the historical financial information, pro forma financial information and/or forecast to be included in a prospectus, pre-listing statement or circular.

Share, in relation to a company, is a share in the share capital of that company and includes stock and, in relation to an offer of shares for subscription or sale, includes a share and a debenture of a company, whether a company within the meaning of the Companies Act or not, and any rights or interests (by whatever name called) in a company or in any such share or debenture.
Pro forma financial information

.11 The guidelines in paragraphs .12 to .84 are to be applied in the presentation of pro forma financial information to be included in a prospectus, pre-listing statement, circular or announcement prepared and presented in accordance with the provisions of the JSE Listings Requirements.

.12 The Listings Requirements require the presentation of the following pro forma financial information:

For a corporate action, the subject of a prospectus, pre-listing statement, circular or announcement:

- pro forma earnings and headline earnings per share (and diluted pro forma earnings and headline earnings per share if applicable), and
- pro forma net asset value and net tangible asset value per share

In addition, for a category 1 or 2 transaction (as defined in section 9 of the Listings Requirements), a rights offer, claw back offer or specific issue of shares for cash:

- a pro forma balance sheet,
- a pro forma income statement, and
- a detailed note reconciling any material changes to equity.

The balance sheet, income statement and earnings per share are to be calculated and presented in terms of International Financial Reporting Standards. Headline earnings per share is calculated in terms of Circular 7/2002, Headline Earnings issued by SAICA. Net asset value and net tangible asset value are defined above. The reconciliation of changes to equity is not a statement of changes in equity as required by International Financial Reporting Standards but must rather, by way of a reconciliation show all changes to share capital, reserves or another equity item as a result of the corporate action. This reconciliation can be presented in the format of a note where there is no change to equity other than the issue of shares as a result of the corporate action.

Information to be presented

.13 Pro forma financial information is to provide investors with information about the impact of the corporate action, the subject of the prospectus, pre-listing statement, circular or announcement by illustrating how that corporate action might have affected the reported
results of the issuer had the corporate action been undertaken at the commencement of the period being reported on or, in the case of a pro forma balance sheet, at the date reported on. The pro forma financial information presented is not to be misleading, is to assist investors in analysing future prospects of the issuer and is to include all appropriate adjustments permitted by paragraph .55 below of which the issuer is aware, and which are considered necessary to give effect to the corporate action as if the corporate action had been undertaken at the commencement of the period being reported on or, in the case of a pro forma balance sheet, at the date reported on.

Some examples of corporate actions for which pro forma financial information may be presented are set out below:

- For an acquisition or disposal, the purpose of pro forma financial information is to illustrate the effect thereof on the issuer’s financial position and, results of operations.
- For an issue of equity, the purpose of pro forma financial information is often to illustrate the effect on earnings per share and headline earnings per share through the reduction in gearing and interest costs that result from the application of the proceeds of the issue in repaying debt and the effect on net asset value and net tangible asset value.
- On a repayment of capital through a share buyback scheme, the purpose of pro forma financial information may be to illustrate the effect on earnings per share and headline earnings per share of a change in gearing or a reduction in cash balances.
- When a business undertaking is unbundled, the purpose of pro forma financial information may be to illustrate the impact of the unbundling on gearing or other balance sheet ratios and the earnings and headline earnings of the remaining businesses of the issuer after the unbundling.

Pro forma financial information for inclusion in a prospectus, pre-listing statement, circular or announcement is prepared by:

- presenting financial information that is included elsewhere in the prospectus, pre-listing statement or circular or that has been previously reported, and
- making adjustments to that information to illustrate how it might have been affected had the corporate action occurred at an earlier date.
.16 Pro forma financial information is the result of adjusting information about the issuer at a specific date or for a particular period. Even though adjustments can be based on information at a different date or for a different period or relate to subsequent corporate actions, the result is still described as pro forma financial information at the date or for the period covered by the unadjusted source information about the issuer. In addition, the process of deriving pro forma financial information is always characterised as one of adjusting information about the issuer. For example, even where several acquisitions are being reflected, the pro forma financial information is not the result of aggregating information about a number of business undertakings but of adjusting information about the issuer to reflect acquisitions.

**Judging whether information is misleading**

.17 Pro forma financial information is not to be misleading. To judge whether or not pro forma financial information is misleading, the purpose of the information is to be identified. Paragraphs .25 and .26 below discuss this fundamental precondition in further detail. In making this judgement, the pro forma financial information as a whole is to be considered, having regard to each of the following components of the information:

- The introductory narrative explaining the purpose and nature of the pro forma financial information.
- The statements, formats and captions selected for presentation.
- The unadjusted information about the issuer and whether it is actual or forecast and audited or unaudited.
- The adjustments.
- The pro forma totals.
- The notes explaining sources of information, adjustments and the assumptions underlying the basis of preparation.

.18 The requirements that pro forma financial information is not misleading does not imply that pro forma financial information can result in fair presentation of the effect of a corporate action. Pro forma financial information does not purport to represent what the issuer’s financial position or results of operations would have been had the corporate action occurred at the date assumed for the purpose of its preparation. Nor does it purport to show what the issuer’s financial position or results of operations will be once the corporate action does occur. Pro forma financial information indicates instead how a corporate action
Historical and forecast information about financial performance and position is part of a range of information that investors use to consider the future prospects of an issuer. Pro forma financial information provides investors with illustrative information about the impact of proposed corporate actions on historical or forecast information and so may provide some assistance in their analysis of future prospects. In judging whether or not pro forma financial information is misleading, consideration is given, amongst other things, to the relevance of the information to any assessment of the issuer’s future prospects.

The term “appropriate adjustments” is to be viewed in the context of the purpose for which the pro forma financial information is prepared. The requirement to include all such adjustments emphasises the need to avoid cherry-picking. In judging whether or not information may be misleading, it is to be ensured that overall the adjustments are not materially biased or one-sided. For example, where the purpose of pro forma financial information is to show the potential effect of an acquisition on asset backing and profitability, it would be inappropriate to include fixed assets in a net asset statement at their fair values without reflecting depreciation charges based on those values in any pro forma income statement information. Similarly, it would be inappropriate to illustrate an identified cost saving without reflecting a potential related cost increase or revenue reduction. For example, where the proceeds of a share issue will be used to fund a debt repayment and this leads to a pro forma adjustment to reduce interest expense, the issuer also reflects any related increase in its tax charge.

Issuers are to include all appropriate adjustments of which they are aware.

The reference to all appropriate adjustments is also to be read on the basis that the concept of materiality applies to the process of preparing pro forma financial information. Therefore, issuers need to make adjustments only for those items that are likely to influence the decisions of investors. Indeed, by making adjustments for immaterial items, issuers may give a false impression of the precision and reliability of the resulting pro forma financial information and detract from disclosures they make about the nature and limitations of the
information. Nevertheless, issuers are to bear in mind that the materiality of an item is determined not only by its size but also by the qualitative factors of its nature and circumstances.

**Articulation**

.23 Pro forma financial information is to give effect to a corporate action as if the issuer had undertaken the corporate action at the commencement of the period being reported on or, in the case of a pro forma balance sheet or net asset statement, at the date being reported on. These requirements mean that, where pro forma financial information is presented both for a period and at a date, it may not “articulate”. Financial statements exhibit articulation when different primary statements, such as the balance sheet and income statement, reflect different aspects of the same corporate action and are founded on the same judgements and methods of calculation. This is not necessarily true of pro forma financial information.

.24 As a consequence of this possible lack of articulation, a pro forma balance sheet may not reflect the cumulative impact of pro forma income statement adjustments. By way of example, it is appropriate to assume for pro forma income statement purposes that the proceeds of a share issue are received at the beginning of the period. The proceeds might then be applied to the repayment of debt so that interest costs are reduced. However, a pro forma balance sheet at the end of the period may not reflect the benefits of reduced interest costs since, in preparing the pro forma balance sheet, the issuer assumes that it only receives the proceeds at the balance sheet date. Nevertheless, where there is disclosure of the differing assumptions that underlie pro forma financial information, possible lack of articulation does not make such information misleading.

**Deviation from the principle of backdating a transaction for income statement purposes**

.25 The overriding principle is that the pro forma information should not be misleading. By assuming that a corporate action was effective at the beginning of a period, in the case of a pro forma income statement, may result in certain adjustments being misleading. There are therefore certain exceptions to the principle of reflecting a corporate action at the beginning of the period for income statement purposes and at the end of the period for balance sheet purposes. These are set out below.
For the disposal/acquisition of a business undertaking, assuming the net asset value at the beginning of the period could result in a profit or loss value attached to the tangible and intangible assets acquired being materially different from that at the actual effective date of the transaction. In this case it may be more appropriate to assume the net assets disposed of or acquired at the actual effective date, or the balance sheet date, thereby reflecting a more appropriate adjustment for the profit or loss on disposal, goodwill and adjustment for depreciation of the assets acquired.

In the case of an option, the option value at the beginning of the period may not be a true reflection of the effective date option value. In this case it may be more appropriate to calculate the option value at the actual effective date, or the balance sheet date, thereby reflecting a more appropriate adjustment.

**Presentation of information**

The information is to state clearly:

- the purpose for which it has been prepared,
- that it is prepared for illustrative purposes only, and
- that because of its nature, it may not fairly present the issuer’s financial position, changes in equity, results of operations or cash flows.

These disclosures caution readers of pro forma financial information about the value of the information and the use to which it should be put.

Users of pro forma financial information generally cannot expect it to show a fair picture of the issuer’s financial position, changes in equity, results of operations or cash flows. Reasons for this include the following:

- The actual corporate action will take place at a date later than that at which it is included in the pro forma financial information and so subsequent trading and changes in the mix of assets and liabilities will not be reflected.
- If the issuer had undertaken a corporate action at the beginning of the period, as is assumed for pro forma income statement and cash flow purposes, then it might have taken different commercial
decisions during the subsequent period. Such hypothetical decisions cannot be reflected in pro forma financial information or objectively determined for disclosure elsewhere in the prospectus, pre-listing statement, circular or announcement.

**Identifying the purpose of the information**

.31 Disclosure of the purpose for which pro forma financial information is prepared is fundamental to its presentation. The generic purpose of pro forma financial information is to illustrate the effects of one or more corporate action/s on certain unadjusted financial information or aspects of that information. It therefore clearly identifies the specific corporate action/s and unadjusted financial information involved. As well as identifying the purpose of pro forma financial information in overall terms, for example to illustrate the effects of a share issue, issuers are also to make more specific references, for example to the effects on gearing and interest cover. Unless the issuer identifies a specific purpose, it will not be apparent to investors why it has selected particular pro forma statements for presentation and why it has highlighted particular captions within those statements.

.32 It is highly unusual for issuers to prepare complete pro forma financial information comprising a balance sheet, statement of changes in equity, income statement, cash flow statement and supporting notes. This is because their purpose in presenting pro forma financial information rarely requires the presentation of more than an analysis of assets and liabilities shown on the face of the balance sheet, a summarised income statement, earnings per share and headline earnings per share. The provision of additional pro forma financial information could actually frustrate the purpose of the information and give a false impression of its reliability.

**Information to be presented in columnar form**

.33 The information is to be presented in columnar format showing separately the unadjusted financial information, the pro forma adjustments and the pro forma financial information. The pro forma financial information is to be prepared in a manner consistent with both the format and accounting policies adopted by the issuer for its financial statements and is to identify:

- the basis upon which it is prepared, and
- the source of each item of information and adjustment.
Pro forma financial information is presented in columnar format. The first column shows unadjusted financial information for the issuer on which the effect of one or more corporate actions is illustrated. Subsequent columns reflect adjustments for the effect of the corporate action or corporate actions that are the subject of the prospectus, pre-listing statement or circular. The issuer may aggregate adjustments to simplify the presentation so long as there is sufficient detailed disclosure in the notes to explain clearly the components of each column. The final column displays the resultant adjusted amounts. An adjustment column need not be presented for an announcement or in the summarised financial effects table, in which case there will just be a before and an after column.

Where more than one corporate action is involved, the separate effects of each corporate action must be presented. Where, however, the corporate actions are conditional upon one another and the resolutions to be voted on at the general meeting are conditional upon one another, the JSE must be approached and its approval obtained for the effects of such corporate actions to be combined and shown in one column. If, however, the inter-conditional corporate action is a related party transaction, or if the JSE believes that it is misleading to combine the effects, separate financial effects will have to be shown.

If the issuer has previously published financial effects that have not been reported on by the reporting accountant but, in respect of which, the exclusion thereof would render the effects in respect of the current corporate action less meaningful, such previously published financial effects should be included in a separate column and should be reported on by the reporting accountant as part of the current report. At the announcement stage, the issuer must show the effects of this previous corporate action/s separately from the current corporate action/s.

**Accounting policies**

Pro forma financial information is to be presented in a manner consistent with both the format and accounting policies adopted by the issuer in its report of historical financial information. This does not preclude simplification of the presentation where such simplification assists in a clear reading of the pro forma financial information and is consistent with the specific purpose of the pro forma financial information. In quantifying adjustments, the issuer is to apply accounting policies on the same basis as the issuer would normally
adopt in preparing its annual financial statements. However, the format and purpose of the pro forma financial information are likely to constrain the extent of the related disclosures.

Application of acquirer’s policies on an acquisition

The requirement to apply the issuer’s accounting policies in preparing pro forma financial information applies to adjustments made in respect of a material acquisition. Where the report of historical financial information of the acquired business undertaking has not been adjusted to the accounting policies of the issuer, because it is impractical, the presentation of pro forma financial information may be misleading. The JSE should therefore be consulted. The JSE may consider waiving this requirement if the circumstances warrant it and provided that there is adequate disclosure of the differences in accounting policies, and shareholders are warned about the nature of the non-compliance with this paragraph of the Listings Requirements.

New accounting standards

In general, pro forma financial information is prepared in accordance with the policies adopted in the unadjusted financial information of the issuer at the relevant date or for the relevant period even where new accounting standards will apply subsequently. It is never appropriate for adjustments in pro forma financial information to reflect the retrospective impact of new financial reporting standards on previously reported financial information. Nevertheless, when adoption of a new standard will not result in restatement of such unadjusted financial information, and the new standard will need to be applied to the corporate action that is the subject of the pro forma financial information, issuers may calculate adjustments on the basis of the new standard. An issuer makes appropriate disclosure where it accounts for a corporate action in pro forma financial information on a different basis from that which a new standard will require it to apply in its subsequent financial statements. Furthermore, if the issuer has no current accounting policy for the transaction, it must apply the accounting policy that it would be required to apply in its next reporting period.

Selection of periods

Pro forma financial information may only be published in respect of:

- the most recent completed financial period, and/or
13

• the most recent interim period for which unadjusted information has been published or is being published in the report of historical financial information,
• in the case of a pro forma balance sheet, as at the date on which such periods end or ended, or
• the forecast (provided the forecast has been published and reported by the reporting accountant in terms of the JSE Listings Requirements) for income statement purposes and the appropriate historical period ended for balance sheet purposes.

The selection of the periods or dates used for presenting pro forma financial information depends on the situation under consideration and the specific purpose of the information. The prohibition on presenting pro forma financial information for more than the financial year immediately preceding the issue of the prospectus, pre-listing statement, circular or announcement prevents issuers from presenting a three year record on a pro forma basis. Going back more than one financial year is likely to produce meaningless information.

The period or the date of the unadjusted information relating to the issuer determines the period or date in respect of which pro forma financial information is published. This is true even where an issuer makes adjustments in respect of information drawn up for other periods or at other dates.

Subsequent events
No adjustments may be made to pro forma financial information in respect of post balance sheet events except:

• as provided for in the International Accounting Standard on Events After the Balance Sheet Date, or
• in respect of the particular corporate action for which the pro forma financial information is being presented, or
• in respect of any previously published financial effects; or
• in respect of any post balance sheet corporate action of the issuer or of the target, where it would be misleading not to make an adjustment.

Adjustments must be made for a post balance sheet corporate action where it would be misleading not to make an adjustment. Examples of these sorts of corporate actions would include, amongst other things, a
category 2 transaction, a material disposal by the target or the
declaration of a large dividend. The issuer must show the effects of the
post balance sheet corporate action in a separate column if a reporting
accountant has not previously reported on the financial effects. In the
instance where the financial effects have been previously reported on
by a reporting accountant in a circular or prospectus, the issuer can use
as the starting column the previously published results.

.45 Where non-adjusting events after the balance sheet date are of such
importance that non-disclosure would affect the ability of investors to
make proper evaluations and decisions, the nature of the event and an
estimate of its financial effect (or a statement that such estimate cannot
be made) are disclosed in the notes to the pro forma financial
information.

.46 It is recommended practice to draw attention to the approach taken with
regard to subsequent events by making a disclosure in the notes to the
pro forma financial information to the effect that it does not take
account of any trading or other corporate actions subsequent to the date
of the financial statements.

Acquisitions and accounting periods

.47 Where a pro forma income statement or cash flow information is
presented for two or more entities or business undertakings, such as
may be the case in a material acquisition, the unadjusted information
about the issuer and the adjustments in respect of the other entity or
entities are to cover periods of the same length.

.48 Whilst desirable, it is not normally necessary to use coterminous
accounting periods when preparing a pro forma income statement or
cash flow information for two or more entities or business
undertakings. For example, an entity may be preparing a pro forma
income statement based on its latest 31 December year end results for
inclusion in a circular for a Category 1 acquisition. If twelve month
income statement information is only available for the business
undertaking to be acquired up to the preceding 30 June, that
information could generally be used for the purpose of making an
adjustment to derive a pro forma income statement.

.49 Even where businesses are seasonal, the use of non-coterminous
accounting periods would not usually distort pro forma income
statement and cash flow information so long as all the information covers a complete year. Nevertheless, where pro forma interim information is presented and seasonal factors are significant, coterminous accounting periods may be required to prevent the information from being misleading.

Non-coterminous accounting periods may also be of concern when preparing pro forma balance sheets. An issuer needs to consider any significant seasonal variations. In the situation of a material acquisition it might not be appropriate to make adjustments to an acquirer’s 31 December information using 30 June information for the acquired business undertaking if it is known that seasonal factors would make the financial position of the acquired business undertaking significantly different at 31 December. In this instance an issuer may consider presenting the pro forma financial information for a twelve month period (as opposed to a six month period) as discussed in paragraph .53 below.

**Unadjusted information**

The unadjusted information of the issuer is to be derived from the most recent:

- published audited financial statements, published interim or provisional reports,
- previously published report of historical financial information,
- previously published pro forma financial information reported, or
- a forecast that has been reported on by the reporting accountants in terms of the Listings Requirements.

The unadjusted information of the subject matter of the acquisition or disposal is to be derived from the:

- most recent published audited annual financial statements, published interim reports, preliminary reports or provisional reports,
- forecast that has been published and reported on by the reporting accountant in terms of the Listings Requirements for income statement purposes and the appropriate historical information for balance sheet purposes,
- unpublished management accounts provided that:
  - the issuer is satisfied with the quality of those management accounts,
shareholders are warned about the source of the information, and
- the category 1 or 2 transaction or related party circular to shareholders includes those management accounts and a reporting accountant’s review or audit opinion (whichever is applicable) on those accounts.

.53 The above does not require the issuer to use information from the most recent source amongst those listed in paragraph .52, but it does require the most recent information to be used once the issuer has chosen one of the options set out above. For example, where an issuer has published a forecast, it could still present pro forma income statement information based on its latest published financial statements for its most recent completed period. Notwithstanding paragraph .52, an issuer may be allowed to present pro forma income statement and cash flow information based on the most recent published financial statements even if a more recent interim statement has been published. This would be possible where the presentation of pro forma financial information for a full year would better serve the stated purpose of the pro forma financial information.

.54 At an announcement stage, the published information for the target company may be more than twelve months old. In this instance, the issuer can use management accounts provided that it is satisfied that the management accounts are unlikely to be materially different from the final published results and that full disclosure is made to shareholders, warning them that the source information has not been audited or reviewed.

Adjustments

.55 Any adjustments that are made to the information referred to in paragraph .51 above in relation to any pro forma statement are to be:
- clearly shown and explained,
- directly attributable to the corporate action concerned and not relating to future events or decisions,
- factually supportable, and
- in respect of a pro forma income or cash flow statement, clearly identified as those adjustments that are expected to have a continuing effect on the issuer and those that are not.
It is important that issuers clearly show and explain each adjustment so that investors can understand those adjustments. With this objective of transparency in mind, issuers include detailed notes to the pro forma financial information that set out:

- each individual adjustment,
- any assumptions on which the adjustments are based,
- the range of possible outcomes where there is significant uncertainty,
- the sources of the amounts concerned, and
- where relevant, how adjustments have been aggregated or allocated to financial statement captions.

The purpose of the requirement that adjustments are directly attributable to the corporate action concerned is to prevent pro forma financial information reflecting matters that are not an integral part of the corporate action which is the subject of the prospectus, pre-listing statement, circular or announcement. In particular, pro forma financial information does not include adjustments that are dependent on actions to be taken once the corporate action has been completed, even where such actions are central to the issuer’s purpose in entering into the corporate action, e.g. eliminating duplicate facilities after an acquisition.

In order to provide assurance as to the reliability of pro forma financial information, adjustments are supported by facts. The nature of the facts supporting an adjustment will vary according to the circumstances. Nevertheless, facts are expected to be capable of some reasonable degree of objective determination. Support might typically be provided by published financial statements, other financial information and valuations contained in the prospectus, pre-listing statement or circular, purchase and sale agreements and other agreements integral to the corporate action covered by the prospectus, pre-listing statement, circular or announcement.

An issuer may be aware of the need to make an adjustment whilst lacking the appropriate factual support to satisfy paragraph .55. In these circumstances, the issuer bears in mind the stated purpose of the related pro forma financial information and considers whether disclosing the omission of the adjustment will be sufficient to prevent the pro forma financial information from being misleading. In such a
case, the issuer would normally consult the JSE. Where disclosure will not suffice, the issuer either makes further efforts to obtain appropriate support or reconsiders whether or not the proposed purpose of the pro forma financial information is realistic. This is particularly important where pro forma financial information could be misleading for reasons that are beyond the control of the preparer. As in other areas of financial reporting, there is sometimes a trade-off between the relevance and reliability of financial information. This may mean that an issuer does not report information that may be relevant because it is not sufficiently reliable.

**Continuing effects**

.60 In respect of pro forma income or cash flow statements, the issuers are to identify clearly those adjustments that are expected to have a continuing effect on the issuer and those that are not. An issuer is not permitted either:

- to omit adjustments that are directly attributable to a corporate action and factually supportable on the grounds that they do not have a continuing effect, or
- to make adjustments to eliminate items solely on the grounds that they are considered not to have a continuing effect.

.61 Ultimately, it is the responsibility of investors to make their own individual assessments of future earnings and cash flows. Consequently, it is recommended that an issuer interprets the fourth bullet of paragraph .55 in line with the requirements of the International Financial Reporting Standard on *Non-current Assets Held for Sale and Discontinued Operations*, which covers appropriate disclosure of the result of continuing and discontinued operations and separately disclosable items of income or expenditure within profit or loss from ordinary activities. Items attributed to discontinued operations will not have a continuing effect, and items identified as separately disclosable will generally be presumed not to have such an effect. An issuer does not explicitly describe other items as having or not having a continuing effect.

.62 The following paragraphs describe the application of paragraph .55 to a number of items that are frequently considered for adjustment in pro forma financial information.
Tax and similar effects
An issuer considers the tax effects of adjustments directly attributable to a corporate action, along with other non-discretionary effects, such as any material impact on profit-related bonuses. In quantifying tax effects, the issuer looks at the incremental impact on tax liabilities and assets using the issuer’s accounting policies for taxation rather than simply applying the issuer’s overall effective tax rate. The types of taxes that must be considered include, amongst other things, Income Tax, Secondary Tax on Companies and Capital Gains Tax.

Transaction costs
An adjustment must be made for costs directly attributable to a corporate action that do not relate to future events or decisions and are factually supportable. Written estimates from advisers that are disclosed in total elsewhere in the prospectus, pre-listing statement or circular will normally provide sufficient factual support. The issuer must indicate if costs have been expensed or capitalised.

Debt repayment
The proceeds of an issue of shares in terms of a prospectus, pre-listing statement, circular or announcement are often used to repay debt. The issuer generally wishes to present pro forma financial information to illustrate the potential effect of such corporate actions on gearing, interest cover and earnings. Two questions that commonly arise in determining the relevant adjustments are:

- how to allocate the proceeds of the issue to the repayment of different debt instruments when insufficient funds will be raised to repay all debt, and conversely,
- how to treat any excess of the amount raised over the debt shown in the unadjusted financial information of the issuer.

In addressing the first question, proceeds of the issue are allocated to the repayment of debt instruments on the basis of commitments stated in the prospectus, pre-listing statement, circular or announcement or legal agreements existing at the date of the prospectus, pre-listing statement, circular or announcement that specify how the issuer will apply the proceeds. In rare circumstances where there are no stated commitments or legal agreements, the repayment of debt would not be directly attributable to the corporate action that is the subject of the prospectus, pre-listing statement, circular or announcement. It would relate instead to future events or decisions, and non consequential
adjustment would be made to reduce debt balances or interest costs in the pro forma financial information.

.67 Where a corporate action results in an increase in cash balances in a pro forma net asset statement or balance sheet, it is normally inappropriate to make an adjustment to pro forma income statement or earnings information to reflect interest or other income that cash balances might generate. This is because where management has discretion over how to use positive cash balances, any adjustment for interest or other income on those balances would not satisfy the requirement of paragraph 55, that is to be factually supportable and unrelated to future events or decisions. Exceptions would only arise where an issuer was committed to invest funds in a particular way, which meant that it could demonstrate that income would be earned and could quantify it. This could arise, for example, where a financial institution is raising funds to meet capital adequacy requirements. The issuer draws investors’ attention to the pro forma income statement treatment of issue proceeds where it is considered to be of particular significance in helping investors understand the issuer’s prospects. The principle of not reflecting interest or other income that cash balances might generate is in line with the requirements of other major international security exchanges. Including an interest received benefit often results in significantly improved pro forma earnings. This can be misleading where the cash is invested in working capital or new operations (particularly for mining companies) that will not generate returns in the immediate future.

.68 Where it would be misleading not to show income attributable to the increase in cash resources, an issuer must consult the JSE. If the corporate action that results in the increase in cash is a rights offer or an issue of shares for cash the JSE may permit the issuer not to show an effect on earnings. In this instance, the issuer must provide a detailed note to the financial effects setting out the proposed application of the funds.

**Fair value adjustments**

.69 An issuer entering into a corporate action accounted for as an acquisition will need, as a direct consequence of the corporate action, to ascertain the fair value of the underlying assets and liabilities of the acquired business undertaking in accordance with the International Financial Reporting Standard on *Business Combinations*. This
statement essentially precludes making fair value adjustments that depend on future events or decisions. However, where the issuer judges that fair value adjustments are unlikely to be material in the context of the stated purpose of pro forma financial information, such adjustments are not necessary. For example, where a pro forma balance sheet is intended to illustrate the impact of an acquisition on gearing, as opposed to tangible net assets per share, then any misallocation of the purchase consideration between goodwill and a fair value adjustment on properties is unlikely to be significant. In such a case, the issuer makes appropriate disclosure in the notes to the pro forma financial information. In other circumstances, the issuer may need to record fair value adjustments, supported, as appropriate, by note disclosure of their provisional nature and any related uncertainties and contingencies. Where initial estimates are subject to significant subsequent changes, the issuer will need to ensure that it makes appropriate disclosure to investors. An issuer must use its best endeavours to comply fully with the International Financial Reporting Standard on Business Combinations. This may not be possible for the requirement to allocate the excess purchase consideration between the different classes of assets. In this instance, the issuer must disclose the extent to which it has not complied fully with the standard.

**Business undertakings being sold**

Financial information on a business undertaking that is the subject of a material disposal is normally extracted from the report of historical financial information in the related circular that is required by the JSE Listings Requirements. However, where an issuer presents pro forma information in an announcement, it is allowed to make adjustments based on interim financial statements of the business undertaking to be disposed of, notwithstanding that these amounts will not have been separately disclosed in the disposal circular or separately published elsewhere. Information about a business undertaking to be disposed of is generally considered to be factually supportable in so far as it comprises amounts that have been incorporated in the unadjusted information previously published by the issuer.

**Foreign currency translation**

It may be necessary to translate adjustments into the reporting currency of the issuer. For a pro forma balance sheet, the rate applied would usually be the rate ruling at the date of the issuer’s unadjusted balance sheet. For a pro forma income or cash flow statement, the issuer would
adopt its normal translation policy for subsidiaries. If the issuer uses an average rate, the rate applied for the purposes of making an adjustment would normally be calculated on the basis used by the issuer in preparing its unadjusted information for the relevant period. In the note to the pro forma financial information, the issuer must disclose the rates used, and should provide an explanation where the rates used for balance sheet and income statement purposes are significantly different.

**Consideration in cash or shares**

It may be necessary to make an assumption where there is a choice as to the form in which consideration is received or paid. For example, it may not be possible to determine in advance the extent to which a mixed cash and shares offer would be taken up in cash or shares. Consequently, an issuer will need to make an assumption as to the mix that they believe is most likely and state that assumption clearly. Any assumption that is made would need to represent an appropriate basis, given the stated purpose of the pro forma financial information. In addition, for a prospectus, pre-listing statement or circular, an issuer must present two further scenarios showing the two extremes of a one hundred percent cash consideration and a one hundred percent share consideration. This must also be done in a columnar presentation.

**Contingent consideration**

In accordance with the principles outlined in the International Financial Reporting Standard on *Business Combinations*, to the extent that consideration is payable or receivable in the future and is dependent on the outcome of future events, the issuer needs to make an appropriate assumption as to the most likely amount to be paid. This does not violate the prohibition on making adjustments relating to future events. The need to make a best estimate of the amount of contingent consideration that is payable or receivable is a direct consequence of an acquisition or disposal. The relevant future events determine how accurate such an accounting estimate turns out to be but do not determine whether an estimate needs to be made. Where initial estimates are subject to material subsequent changes, issuers will need to ensure that appropriate disclosure is made to investors in their subsequent interim report, preliminary report or provisional report.

It may appear prudent to assume that the maximum amount payable under an acquisition agreement will be paid or that the minimum amount receivable under a sale agreement will be received. However,
the overriding requirement is to make an appropriate estimate, given
the stated purpose of the pro forma financial information. In
circumstances where the impact of paying or receiving additional
consideration could be significant, an issuer must present an extension
to the pro forma financial information illustrating the potential impact
of such additional consideration to the maximum extent. This must be
done in a columnar presentation. It is recommended that the notes to a
pro forma balance sheet summarise the terms on which additional
consideration is computed and any cap on that consideration.

**Synergy benefits**
It is often the case that acquisitions are justified in terms of the
synergies to be obtained from bringing two business undertakings
together, either through savings in costs or through enhanced cross-
selling of products and services. Pro forma financial information
provides a common basis that investors can adjust to allow for
estimated synergy benefits and other post-corporate action events. It is
not, however, to be seen as indicating the issuer’s post-corporate action
performance or financial position.

Synergies are normally dependent on the future actions of the
management of the enlarged group after completion of the corporate
action. Consequently, synergies are not to be the subject of
adjustments made in deriving pro forma financial information, although
it may be appropriate to indicate opportunities for synergy benefits
elsewhere in the prospectus, pre-listing statement, circular or
announcement. Nevertheless, it is consistent with this principle that
pro forma forecasts might reflect synergy benefits accounted for in the
post-acquisition period that affect the issuer or the business undertaking
acquired.

**Cost and revenue eliminations**
When considering a listing or the bringing together of two or more
business undertakings on an acquisition, it is sometimes possible to
identify past costs or revenues that will not occur in future financial
periods under the terms of the corporate actions. For example, levels of
remuneration paid prior to an acquisition or listing can be inconsistent
with agreements entered into at the time of such corporate actions.
Whilst it may be reasonable to consider eliminating such costs as an
adjustment in a pro forma income statement, they will often need to be
offset against increases in other costs, which the issuer will incur, that
are not capable of being factually supported. In such circumstances, issuers provide separate disclosure of past costs or revenues that will not occur in future, instead of eliminating them through pro forma adjustments.

**Reflecting other small corporate actions**

.78 Issuers may wish to make adjustments to reflect other corporate actions that have taken place since the latest balance sheet date but that did not require a prospectus, pre-listing statement or circular. These could be immaterial acquisitions or disposals or small issues of capital.

.79 As explained in paragraph 55, as a matter of general principle adjustments are limited to:

- the corporate action that is the subject of the prospectus, pre-listing statement, circular or announcement, e.g. the new issue of shares covered by the prospectus, pre-listing statement, circular or announcement,
- in respect of any post balance sheet corporate action of the issuer or of the target, where it would be misleading not to make an adjustment, or
- the particular corporate action for which the pro forma financial information is presented, e.g. the acquisition to be made out of the issue of shares covered by the prospectus.

By definition, it is not misleading if adjustments are not made for a small corporate action, and therefore these adjustments should be avoided. It can become confusing to have too many adjustments, which may dilute the understanding of the corporate action that is the subject of the prospectus, pre-listing statement, circular or announcement.

**Earnings per share**

.80 Where pro forma earnings per share and headline earnings per share information is given for a corporate action that includes the issue of securities, the calculation is to be based on the weighted average number of issued shares, adjusted as if that issue had taken place at the beginning of the period.

.81 A note discloses the basis of calculation of pro forma earnings per share and headline earnings per share information. In particular, the note sets out the amount of the earnings and the number of equity
shares used in the calculation. As a consequence, it will also be necessary to present sufficient pro forma income statement information to show the derivation of pro forma earnings.

Where the proceeds of an issue are applied to the repayment of debt but the proceeds exceed the debt outstanding for all or part of the period for which pro forma earnings per share and headline earnings per share are calculated, it is generally not appropriate to take account of interest that might have been earned on the excess. The reasons are the same as those given above in paragraph .59. The issuer explains this aspect of the calculation of pro forma earnings per share and headline earnings per share in the notes to the pro forma financial information where they believe that it is of particular significance in helping investors understand the issuer’s prospects.

**Subsequent adjustments to pro forma financial information**

A supplementary announcement must be made without delay if, at any time after an announcement, the issuer becomes aware that:

- there has been a significant change affecting any matter contained in that earlier announcement; or
- a significant new matter has arisen that would have been required to be mentioned in that earlier announcement if it had arisen at the time of the earlier announcement.

The term “significant” in the context of this paragraph means a change of 3% or more. The supplementary announcement must comply with the provision of paragraph 9.19 of the JSE Listings Requirements.

It is possible that in the course of preparing the circular, and after publishing the announcement, the issuer may find it necessary to make changes to the pro forma financial information. If the changes are significant, an issuer must publish an announcement detailing these changes. Furthermore, until such time as the issuer publishes its first interim, preliminary or provisional report incorporating the corporate action, an issuer must consider making an announcement if a new matter arises.
Responsibilities of the reporting accountant

.85 The objective of an engagement to report on pro forma financial information to be included in a prospectus, pre-listing statement or circular is to enable the reporting accountant to conclude whether or not the pro forma financial information is properly prepared and presented in accordance with the International Standard on Assurance Engagements applicable to Assurance Engagements Other Than Audits or Reviews of Historical Financial Information and the JSE Listings Requirements. The guidelines in paragraphs .86 to .118 are to be applied in reporting on the pro forma financial information to be included in a prospectus, pre-listing statement or circular.

Conclusion to be expressed

.86 The reporting accountant is to express a conclusion on the pro forma financial information in terms of the following three elements:

- Whether or not the pro forma financial information has been properly compiled on the basis stated.
- Whether or not such basis is consistent with the accounting policies of the issuer.
- Whether or not the adjustments are appropriate for the purposes of the pro forma financial information as disclosed pursuant to paragraph .13 of this guide and section 8.17 of the JSE Listings Requirements.

.87 The first element of the conclusion relates to the compilation of the pro forma financial information from the stated sources, and entails consideration of the accuracy of extraction of information from the sources and the arithmetical accuracy of the calculations in arriving at the pro forma financial information.

.88 The second element entails consideration of whether or not the adjustments have been recognised, measured and presented in the pro forma financial information in accordance with the accounting policies of the issuer.

.89 The third element entails consideration of whether or not the adjustments made by the issuer in preparing the pro forma financial information satisfy the requirements of paragraph .13.
The work to be performed, having regard to the nature of pro forma financial information and the conclusion expressed in terms of paragraph 86, is substantially less in scope than that of an audit, and consists primarily of comparing the unadjusted financial information with the source documents, considering the adjustments in the light of the accounting policies of the issuer, considering the evidence supporting the adjustments provided by the directors and making enquiries of the directors regarding the process by which they have fulfilled their responsibilities.

Whilst the reporting accountant is not required to report explicitly as to whether or not the pro forma financial information is misleading, paragraph 13 requires that the information as presented by the directors is not to be misleading, and the reporting accountant is required to express a conclusion on whether or not the adjustments are appropriate for the purposes of paragraph 55. Matters that might be relevant to the question of whether or not the pro forma financial information is misleading include:

- whether or not appropriate disclosure is made as to any inherent deficiencies or limitations in unadjusted financial information,
- whether or not adjustments of which the issuer is aware and that are material to the purpose of the pro forma financial information have been omitted, and
- whether or not the issuer has made inappropriate adjustments.

In the event that the reporting accountant has reason to believe that the pro forma financial information is misleading, in the context of the purpose for which the pro forma financial information has been presented, the reporting accountant must express a modified or qualified conclusion unless the reporting accountant has resolved the matter. The JSE will not accept a modified or qualified conclusion except in rare circumstances. The impact of any form of modification or qualification should be discussed with the JSE at an early stage.

**Presentation of pro forma financial information**

The reporting accountant applies assurance procedures to the pro forma financial information to assess whether the presentation adopted is consistent with that required by paragraphs 13 to 84, in particular, whether or not:
(a) as required by paragraph .28, the pro forma financial information clearly states the purpose for which it has been prepared, that it has been prepared for illustrative purposes only and that, because of its nature, it may not fairly present the issuer’s financial position, changes in equity, results of operations and cash flows,
(b) as required by paragraph .33, the pro forma financial information is presented in columnar form showing separately the unadjusted financial information, the pro forma adjustments and the pro forma financial information, and
(c) the pro forma financial information is in respect of the periods permitted by paragraph .40.

**Unadjusted financial information of the issuer**

.94 The reporting accountant determines whether or not the source of the unadjusted financial information of the issuer is one of those permitted by paragraph .51.

.95 Since the acceptable sources of unadjusted financial information are prescribed, the reporting accountant is not required to have audited or reviewed the information.

.96 If the reporting accountant has reason to believe that the unadjusted financial information is or may be unreliable, such as if it is unaudited or if a reporting accountant’s or auditor’s report thereon has identified any uncertainties or disagreements, the reporting accountant is to seek to ensure that appropriate disclosure is made. Where such disclosure is not made the reporting accountant is to consider the effect of this on the conclusion expressed on the pro forma financial information. The JSE will not accept a modified or qualified conclusion except in rare circumstances. The impact of any form of modification or qualification should be discussed with the JSE at an early stage.

.97 The reporting accountant reperforms the extraction and, where relevant, summarisation of the unadjusted financial information from the source concerned.

**Adjustments**

.98 The reporting accountant is required to conclude on, among other things, that adjustments are appropriate for the purposes of the pro
forma financial information. Such adjustments will include any information concerning a material acquisition.

Paragraph .13 requires all appropriate adjustments to be made “of which the issuer is aware”. The reporting accountant considers the way in which the directors have fulfilled their responsibilities. With the reporting accountant’s understanding of the corporate action as background, the reporting accountant discusses with the issuer the steps that have been taken to identify relevant adjustments.

If, as a result of these enquiries, the reporting accountant is aware of a significant adjustment, which, in the reporting accountant’s opinion, is to be made for the purposes of the pro forma financial information, the reporting accountant discusses the position with the issuer and, if necessary, its advisers. If the reporting accountant is not able to agree with the issuer and its advisers as to how the matter should be resolved, the reporting accountant considers the consequences for the conclusion expressed. The JSE will not accept a modified or qualified conclusion except in rare circumstances. The impact of any form of modification or qualification should be discussed with the JSE at an early stage.

The requirement for adjustments to be made is qualified by reference to the tests prescribed in paragraph .56.

The reporting accountant considers the adjustments to assess whether or not they are “directly attributable” to the corporate action, the impact of which is being illustrated by the pro forma financial information, that is, that they are an integral part of the corporate action concerned.

The reporting accountant assesses whether or not adjustments “relate to future events and/or decisions”. This condition would lead to the exclusion of adjustments that are related to the corporate action being illustrated but which are dependent on actions to be taken once the corporate action has been completed.

The reporting accountant considers whether or not the adjustments have been clearly shown and explained and, in respect of a pro forma income statement or cash flow information, whether or not they have been clearly identified as to those which are expected to have a continuing effect on the issuer (that is, relate to events or circumstances that are expected to recur) and to those which are not.
The reporting accountant obtains appropriate evidence that the issuer has factual support for each adjustment. Sources of such evidence would include published financial statements, other financial information or valuations disclosed elsewhere in the prospectus, pre-listing statement or circular, purchase and sale agreements and other agreements relating to the corporate action.

**Consistent accounting policies**

It is the responsibility of the directors of the issuer to ensure that the pro forma financial information is prepared on a basis consistent with the accounting policies of the issuer. The reporting accountant’s conclusion requires an assessment as to whether or not the pro forma financial information has been compiled on a basis consistent with the accounting policies of the issuer.

Where the reporting accountant is not the auditor of the issuer or has not prepared a report on the financial information relating to the subject of the corporate action, the reporting accountant makes enquiries of the issuer as to the steps taken to ensure that the pro forma financial information has been prepared on a basis consistent with the accounting policies of the issuer. The reporting accountant applies the requirements contained in the International Standard on Auditing applicable to *Using the Work of Another Auditor*.

**Omitted adjustments**

In view of the specific restrictions on the nature of the adjustments permitted to be made under paragraph .13, the directors may not be permitted to make all the adjustments that they would otherwise wish to make.

If any adjustments are excluded because of the requirements of paragraph .55, the reporting accountant considers the effect on the pro forma financial information in particular whether the exclusion renders the pro forma financial information misleading.

In such circumstances, the reporting accountant may consider that disclosure in the notes to the pro forma financial information of the fact that such an adjustment has not been made is sufficient in the context of the overall purpose of the pro forma financial information.
However, if the reporting accountant concludes that an omitted adjustment is so fundamental as to render the pro forma financial information misleading in the context of the purpose for which it has been presented, the reporting accountant considers the impact of this on the conclusion expressed. The JSE will not accept a modified or qualified conclusion except in rare circumstances. The impact of any form of modification or qualification should be discussed with the JSE at an early stage.

Compilation
The reporting accountant considers whether or not the adjustments made in the pro forma financial information are correctly compiled from the source documentation, and included under the appropriate financial statement caption, as well as the arithmetical accuracy of the pro forma financial information itself.

Representations from management
The reporting accountant is to obtain appropriate representations from management. In addition to the matters referred to in the International Standard on Auditing applicable to Management Representations and the International Standard on Assurance Engagements applicable to Assurance Engagements Other Than Audits or Reviews of Historical Financial Information, the reporting accountant needs to consider the following matters relating to pro forma financial information for incorporation in relevant board minutes or letters of representation:

- Acknowledgement that the directors are responsible for the pro forma financial information.
- Confirmation that the directors have considered the pro forma financial information and that, in their opinion, the information provides investors with information about the impact of the corporate action by illustrating how that corporate action might have affected the financial information.
- Confirmation that, in the directors’ opinion, the pro forma financial information is not misleading.
- Confirmation that the directors have considered the adjustments included in the pro forma financial information and that, in their opinion, the information includes all appropriate permitted adjustments, of which they are aware, necessary to give effect to the corporate action as if the corporate action had been undertaken at the commencement of the period being reported on or, in the
case of a pro forma balance sheet or net asset statement, at the date reported on.

- Confirmation that the directors have considered those adjustments that have been omitted by virtue of not being permitted to be included and the disclosures made in respect thereof and that, in their opinion, the omission of these adjustments does not render the pro forma financial information misleading.

- Any other specific representations relating to information included in the pro forma financial information.

.114 Although the reporting accountant’s report enhances the credibility of the pro forma financial information, the user cannot assume that the reporting accountant’s report is an assurance as to the future viability of the company, nor of the economy, efficiency and effectiveness with which management will conduct the affairs of the company.

**Reporting**

.115 If the reporting accountant concludes that he/she is unable to report in the manner prescribed, the reporting accountant considers modifying or qualifying the conclusion accordingly. However, it is likely that a modified or qualified conclusion would not be acceptable to the JSE and the issuer should make every effort to amend the pro forma financial information to alleviate his/her concerns. The JSE should be consulted as soon as it is clear that the reporting accountant will be issuing a modified or qualified conclusion.

.116 The reporting accountant’s responsibility in relation to the conclusion is limited to the provision of the report and the conclusion expressed. The reporting accountant does not assume responsibility for the pro forma financial information nor, in so far as this report is concerned, any responsibility for the components of the pro forma financial information.

.117 In providing the conclusion, the reporting accountant is not providing any assurance in relation to any source financial information on which the pro forma financial information is based beyond that conclusion. In particular, the reporting accountant is not re-addressing or updating any opinion or conclusion that he/she may have given in any other capacity on that source financial information.
The Appendix to this guide contains an illustrative example of an unqualified reporting accountant’s report on pro forma financial information.
APPENDIX

Illustrative example of a reporting accountant’s unqualified report on the pro forma financial information

INDEPENDENT REPORTING ACCOUNTANT’S ASSURANCE REPORT ON THE PRO FORMA FINANCIAL INFORMATION OF [ISSUING COMPANY]

We have performed our limited assurance engagement in respect of the pro forma financial information set out on pages / in paragraphs ... to ... of the [prospectus/pre-listing statement/circular] dated ... issued in connection with [specify corporate action briefly] that is the subject of this [prospectus/pre-listing statement/circular] of [issuing company]. The pro forma financial information has been prepared in accordance with the requirements of the JSE Limited (JSE) Listings Requirements, for illustrative purposes only, to provide information about how the [corporate action] might have affected the reported historical financial information presented, had the corporate action been undertaken at the commencement of the period or at the date of the pro forma balance sheet being reported on.

Directors’ responsibility
The directors are responsible for the compilation, contents and presentation of the pro forma financial information contained in the [prospectus/pre-listing statement/circular] and for the financial information from which it has been prepared. Their responsibility includes determining that: the pro forma information financial information has been properly compiled on the basis stated; the basis is consistent with the accounting policies of [issuing company]; and the pro forma adjustments are appropriate for the purposes of the pro forma financial information disclosed in terms of the JSE Listings Requirements.
Reporting accountant’s responsibility
Our responsibility is to express our limited assurance conclusion on the pro forma financial information included in the [prospectus, pre-listing statement or circular] to [issuing company] shareholders. We conducted our assurance engagement in accordance with the International Standard on Assurance Engagements applicable to Assurance Engagements Other Than Audits or Reviews of Historical Financial Information and the Guide on Pro Forma Financial Information issued by SAICA.

This standard requires us to obtain sufficient appropriate evidence on which to base our conclusion.

We do not accept any responsibility for any reports previously given by us on any financial information used in the compilation of the pro forma financial information beyond that owed to those to whom those reports were addressed by us at the dates of their issue.

Sources of information and work performed
Our procedures consisted primarily of comparing the unadjusted financial information with the source documents, considering the pro forma adjustments in light of the accounting policies of [issuing company]/the issuer, considering the evidence supporting the pro forma adjustments and discussing the adjusted pro forma financial information with the directors of the company in respect of the corporate actions that are the subject of this [prospectus, pre-listing statement or circular].

In arriving at our conclusion, we have relied upon financial information prepared by the directors of [issuing company] and other information from various public, financial and industry sources.

While our work performed has involved an analysis of the historical published audited financial information and other information provided to us, our assurance engagement does not constitute an audit or review of any of the underlying financial information conducted in accordance with International Standards on Auditing or International Standards on Review Engagements and accordingly, we do not express an audit or review opinion.
In a limited assurance engagement, the evidence-gathering procedures are more limited than for a reasonable assurance engagement and therefore less assurance is obtained than in a reasonable assurance engagement. We believe our evidence obtained is sufficient and appropriate to provide a basis for our conclusion.

**Conclusion**

Based on our examination of the evidence obtained, nothing has come to our attention, which causes us to believe that:

- the pro forma financial information has not been properly compiled on the basis stated,
- such basis is inconsistent with the accounting policies of the issuer, and
- the adjustments are not appropriate for the purposes of the pro forma financial information as disclosed in terms of the section 8.17 and 8.30 JSE Listings Requirements
