# 3. Intended Audience

This document is intended for review by relevant JSE internal departments as well as external/market review by:

- Equity Derivative Members;
- Agricultural Products Members;
- Clearing Members;
- Public Information Subscribers;
- Software Providers

Please note that while this document is equally important for trading and clearing member firms and their software providers, as well as Information Subscribers.

#### 4. System Description

#### 4.1 Introduction

The new JSE Derivatives Trading System is an exchange layer of markets that allow for the trading and dissemination of multiple product types using one system, through a common API. These products can be diverse, each containing their own set of values. Products are further separated into different markets.

Products do contain links between them to facilitate the trading of spreads and switches (also called splits).

## 4.2 Connecting to a market

The system consists of several server programs. A set of server programs constitutes a market. Each market has an interface which allows external systems to communicate with it. The protocol used to interface to the system is TCP/IP. Each market may have its own IP Address and Port number.

The programmer who wishes to use this API specification must first ensure that they can establish a streamed TCP/IP permanent socket connection to the appropriate port.

From this point onwards, all communication is done using message packets. Every message packet, either in or out, must carry a **Transport Header**, which consists of 4 bytes. A description of the transport header can be found in **Table 1.1**.

The transport header is followed by a **Message Header**. The message header contains the indication of who the user is, the details of the transaction performed, etc. A description of the Message Header can be found in **Table 1.2**.

## 4.3 TCP/IP Transport system

The TCP/IP transport system may or may not send a message in its entirety. Due to the nature of the routers, carriers, etc, it is likely that in some cases a message that consists of large number bytes is transmitted in smaller pieces, the length of each being random. The API programmer must ensure the receipt of not only a complete and valid transport header, but also a complete number of message bytes before acting on the contents of the message.

<u>2/11/172/11/17</u> 4/08/1629/07/16

# 4.4 Field Formats

Throughout the document the following field types will be referred to:

- I: Intel Integer format; the length is defined
- U: Intel unsigned integer; the length is defined
- D: Intel/IEEE floating point; 8 byte format
- P: Pascal type string with leading length byte, maximum length is the defined length 1. All strings are represented in this manner.

#### Example:

A string representation of the word MITS into a 6 long field would be sent in the following manner:

0	1	2	3	4	5
4	М	Ι	Т	S	

The system will validate the string only in this context using the byte 0 as the length.

- B: The field is made up of 1 or more bytes of type U
- C: Single character; ASCII equivalent

A field description will also be given which describes the contents:

- A: Alpha only
- N: Numeric only Default for types I.U.D
- AN: Alpha numeric

#### Time Format

- All times given in this document are given as 4 byte values in the following format:
  - Byte 0 = Hours Byte 1 = Minutes
  - Byte 2 = Seconds
  - Byte 3 = 0

Please Note: Mandatory fields in this specification are market with an asterisk (\*). All nonmandatory fields which are not going to be filled in should be sent with 0 for numeric values, and empty strings or padded with null (0) for alpha fields.

# 4.5 Message Headers

## Table 1.1 Transport Header

Name	Length	Comment
Byte 1*	1	255 or FF
Byte 2*	1	Low byte of the message length (not including the 4 byte transport header)
Byte 3*	1	High byte of the message length (not including the 4 byte transport header)
Byte 4*	1	XOR of bytes 2 and 3

#### Total Length: 4 Bytes

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

<u>2/11/17</u>2/11/17 <u>4/08/16</u>29/07/16

# Table 1.2 Message Header

Name	Length	Туре	Description	Case	Example	Comment
Sequence Number	4	1	N	n/a	123	Used for message trace purposes. This is a sequence number per socket and is incremented with each message sent.
User Code*	6	Ρ	AN	U	ABMN	Logged in Member Code. This is the member code the user used to log into the system.
User Dealer*	4	Ρ	AN	U	JOE	Dealer code of logged in dealer. This is the dealer code the user used to log into the system.
User Number*	4	1	N	n/a	66	Any user integer. This is kept by the system and returned to the user unchanged.
Market Number*	1	В	N	n/a	3	See Table 1.3
Time*	4	В	N	n/a	11, 56, 55, 0	Time Format: Hours, Minutes, Seconds, 0
Message Type*	1	В	N	n/a	36	Message Number.
Member Code*	6	Ρ	AN	U	ABMN	This is the member code that would be referred to when the exchange handles the message. For information subscribers this must be set to 'DATA'.
Dealer Code/User Code*	4	Ρ	AN	U	JOE	This is the dealer code that would be referred to when the exchange handles the message. For information subscribers this must be set to the user code supplied.

Total Length: 34 Bytes

Note: The Member Code and Dealer Code may differ from the User Code and User Dealer, for example: A Clearing Member acting on behalf of a Member.

<u>2/11/17<del>2/11/17</del></u> <u>4/08/16</u>29/07/16

Data in the message portion of the packet will then follow the Message Header.

Name	Length	Туре	Description	Case	Example	Comment
Message	MAX -	В	AN	n/a		Defined or compressed
	5466					message.

The messages are defined in two groups:

- Input Messages sent by the API user.
- Output Messages sent to the API user.

These defined groups contain message types that can be defined into two further groups:

- Private Messages
  - These are messages that contain confidential information that is specific for an individual dealer or an individual member firm. An example of this is the 123 Message with deal update/insert indicator.
  - Public messages
    - These are non-confidential messages that contain information that is market specific and available to all users who subscribe to public data. For example: a last price change on a contract would be received by the whole market. Information Subscribers will be key users of these messages.

These messages are Asynchronous; therefore, they may be received in any order.

All header messages contain a market indicator number; Table 1.3 contains market numbers

#### Table 1.3 Market Number

Market Number	Market Abbreviation	Full Market Name
1	EDM	Equity Derivatives Market
2	APD	Agricultural Product Division
4	MUT	Mutual Market

#### 4.6 Compression

A large number of the messages contain data which is considered amenable to compression. Therefore, this data is compressed using the LZH algorithm. The data contains an LZH header defining the decompression criteria, and once a complete compressed data string of bytes has been received, it must be decompressed. The structure of the DECOMPRESSED data is given in this document.

Details of the LZH decompression algorithm can be found at the following URL:

http://www.programmersheaven.com/download/2215/download.aspx

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

<u>2/11/17</u>2/11/17 4/08/1629/07/16

#### 4.7 Large Data Transmission

Message Packet (Message Type 123 and 36)					
Transport Header	Message Header	Message Sub Header	Data Section		
4 Bytes	34 Bytes	14 Bytes (Section 9.1)	Max 5000 Bytes		

Message Packet (Message Type 59)					
Transport Header	Message Header	Message Sub Header	Data Section		
4 Bytes	34 Bytes	1 Byte (Section 8.3)	Max 5000 Bytes		

All Data Sections transmitted to users will have a maximum size of 5000 bytes. When the compressed data buffer is greater than 5000 bytes the system will split this data buffer into a series of Data Sections. These Data Sections will all have a length of 5000 bytes, except the last Data Section which will contain the remainder of the data.

Each data section will then be sent with its own transport header, message header and message sub-header. The message sub-header will indicate if this is the final message of a series. The data will inevitably be in compressed format. Upon receipt of the final message, all Data Sections can be appended and decompressed as a whole.

Only messages 36 (data retrieval), 59 (contract update) and 123 (data update) are compressed, all other messages are not compressed.

#### 4.8 Subscription to Instrument Update Messages

I

The system works on a subscriber basis for all instrument and depth updates. The user will have to send a subscription request message to subscribe to a contract. The list of all configured and active contracts are available through the API specification using a 36 type message (Section **6.6** <u>Market Display dataMarket Display data</u>).

In order to subscribe to a contract, the user would send a type 99 message. This message would contain all the contracts for which the user would like to receive updates. In order to unsubscribe from a contract, the user would send in a type 42 message. This message would contain a list of the contracts from which the user would like to unsubscribe.

The result of sending a type 99 message is a type 59 message containing all the details of the instruments the user subscribed to. When an order is added to the instrument or any depth of the instrument changes the user would receive a type 59 message on the instrument with the updated details automatically. Thus the user only has to subscribe to the instrument once and thereafter they would receive all updates to the instrument. This has to be done for each session.

Subscription is per instrument, date, and expiry and not on the instrument alone. For example the user has to subscribe to DEC 2010 FBWC and not just the FBWC instrument. For more information on contracts see Section **6.6** <u>Instrument, Date and Strike</u> <u>SequencesInstrument, Date and Strike Sequences</u>.

#### 4.9 Acknowledgement of messages

The system is transactional and asynchronous. This means that no ACK or NACK is sent on the application layer to confirm the receipt of messages. Instead a transaction response is sent when a message has been processed by the system.

There are three types of transaction responses:

<u>2/11/17<del>2/11/17</del></u> <u>4/08/16</u>29/07/16 Page 29

Formatted: Font: Bold

Formatted: Font: Bold

- 123 Message (Data update)
  - This is the positive response to the transaction. The data in the message informs the user of the data change and the action taken on the data i.e. Insert, Update or Delete.
- 59 Message (Contract update) This is the positive response to the transaction. The data in the message contains the updated instrument information and depth on the instrument.
- 125 Message (Error and information messages).
   These responses are either negative or positive. A list of common messages can
   be found in Section 11.

In all these message types the Sequence Number in the message header is incremented by each send to the specific socket.

## 4.10 Complex Instruments

Complex instruments are two contracts that are grouped together to make up one contract. The following Complex Instruments can be traded:

- Spread
  - o A Spread is a contract that constitutes one instrument and two expiries.
  - Example: a spread can be traded between the DEC 2007 FBWC and the FEB 2008 FBWC contracts
- Switches
  - $\circ~$  A Switch consists of 2 different instruments with the same expiry date.
  - Example: a switch is contract that is traded between the DEC 2007 FBWC and DEC 2007 ALSI contracts.

# 4.11 Process Flow

API Application		Exchange System
User Sends Message Type 121		
	←	Any Price Update for the contract specified will be returned as
		Message Type 59

#### 4.12 Authorisation of messages and Initial Margin Limits

This section does not apply to information subscribers, as the exchange will authorise subscription to messages for information subscribers.

The system contains levels of authorisation that defines which messages are accepted by entities. (Please see Message Type 7) It also contains authorisation for initial margin limits for each entity (Please see Message Type 6).

The levels of authorisation are as follows starting from the top entity:

The Exchange

•

- The exchange can control all the entities and set all entities' limits and access rights.
- The Clearing Member
  - The Clearing Member limits are set by the exchange; they can lessen the limits set by the exchange but cannot exceed the limits.
  - $\circ~$  The Clearing Member can set limits for all members and member branches that belong to this clearing house.
- The Member / Member Branch
  - The compliance officer for this member can set limits for all dealers on his trading floor.
    - $\circ~$  The compliance officer cannot increase any dealer limits higher than their own.
- The Dealer
  - The dealer can set their own limits lower than what was assigned to them, but not higher.

Limits include messages that are allowed to be sent to the exchange and initial margin limits

 Appendix K - JSE Derivatives Trading System API
 2/11/172/11/17

 Document.docJSE Derivatives Trading System API
 2/11/172/11/17

 Decument v2.1 rev2.doc
 4/08/1629/07/16

#### Example A:

- 1. The exchange sets a clearing members initial margin limit at R100
- The clearing member can alter the limits of his members to R50 each. He cannot set it higher than his limits of R100.
- The compliance officer can set each of the dealers on the floors limits to R30, but not higher than his limit of R50.

#### Example B:

- 1. The exchange sets the limits for a clearing member and allows him to insert and verify the loading of a client.
- 2. The clearing member does not want his members' dealers to verify clients as he would like to do this himself, but does allow them to insert the client.
- 3. He thus restricts his members' dealers to only use the insert client message and not the verify message.

## 4.13 Market Data levels on 59 and 99 messages

This section only applies to Information Subscriber users.

The system allows for 2 levels of subscription for the screen update message (59).

- Level 1 Best Bid or Offer (Allows the user to only see the top of the depth)
- Level 2 Full Depth (Allows the user to see the full depth on a contract)

These levels are setup by the Exchange on the subscription profile of the user. The message received by the user is the same in both cases only the number of depth items changes.

#### 4.14 Principle Agency indicator

Each deal must contain a Principle/Agency indicator. This indicator shows the intention of the deal booked. This indicator has to be sent through in all insert messages of orders and report only deals.

The rule for Principle and Agency is the following.

- An 'A' Agency or 'P' Principle has to be specified on inserting an active order, and on the report only deal entry.
- Agency and Principle deals cannot be accumulated together.
- On Agency trades the price cannot be changed when assigning a deal.
- On Principle trades the price can be changed when assigning a deal.

#### 4.15 Servicing message from TCP IP

Under high amounts of volume, it is imperative that users service the messages from their TCP/IP socket in an efficient manner. The exchange system has controls in place to ensure that users who are not servicing messages in an efficient manner, and thus causing their queue on the communications layer of the exchange system to build up, are disconnected to avoid a build up of pending messages.

A recommended solution to this would be to remove messages from the socket as soon as they arrive, and create an application resident queue of messages. This application resident queue can then be used to process messages. This will then send acknowledgement of receipt of the message to the exchange system as soon as messages arrive, and avoid the potential of being disconnected.

## 4.16 Anonymous Trading – ADDED to API Version 2 published on 18 February 2009

Some instruments will be listed as anonymously traded instruments. The Contract Date download message (Download Message Number 3) includes flags (Future Anonymous and Options Anonymous) to identify the anonymously traded instruments.

The Display Update Messages (59's) published on these instruments will be flagged as anonymous, and the member codes previously displayed will not be published.

The member codes on these display updates will be replaced with uniquely identifiable numbers. Each user will be assigned a number upon login, and this same number will be present in the display update messages. This will allow users to identify their own orders in the market depth.

To cater for anonymously traded instruments user will need to cater for changes to the following messages:

- Change to login response message (Message 1)
- Change to display update message (Message 59)
- Change to contract dates data download message (Message 3 download structure)

## 4.17 Mutual Market Access – from Version 2.1

Revision 2.1 of the API specification enhances the Mutual Market access to members of the Equity Derivatives and Commodity Derivatives divisions of the JSE.

Mutual Market access is now facilitated via their existing connection to either the Equity or Commodity Derivatives Markets.

The mutual market is therefore no longer a separate instance, but rather a subset of contracts available for trading on either the APD or EDM connection.

The following points should be noted:

#### Download notes

- The download of transactional data (i.e. active orders, unmatched deals, completed orders, deals, positions) will only be provided from the market on which the principle on transactional has elected to clear their mutual market in.
- To provide easier access to data, requests downloaded from the primary markets will be inclusive of the mutual market data. For example the download of MTM data, when requested from primary market will include primary market as well as mutual market entries for MTM data. (The primary market is defined as either Equity Derivatives or Commodity Derivatives). This holds true for the following data requests:

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

First Trade of the day	103

Intraday File Update notes:

- When connected to only one market e.g. EDM and placing an order on a mutual market listed contract, the file update message will be returned to the market the user is connected on.
- When connected to both markets (EDM and APD) as the same user code (e.g. SAFMMAT), and an order is placed on a mutual market contract on the EDM connection, the file update will be returned on both the EDM and APD connection. This is inline with the above download notes, i.e. mutual market data is made available on both download and intraday updates on both markets.
- Mutual market data included in both intraday file updates (123) and public data broadcasts (59) will have Market Number 4 set in the header of the message received. This will allow users to identify the source of the data as the mutual market.

### 4.18 Automated Applications connecting to NUTRON

Any applications used for market making or algo trading purposes must be declared as such before connecting them to the JSE environments.

Applications used for automated trading/quoting activity should make use of the single bid / offer per principal functionality to prevent excessive cancellation of order messages into the exchange. See section 7.3.4 and the Cancel Flag field in the Insert Order Structure.

Further the JSE requests all applications of this type to be linked to a user code that is flagged as a Market Maker account. The Market Maker flag changes the behavior of the API slightly. The flagging of the user code as a Market Maker can be requested from the JSE at any time.

2/11/172/11/17

4/08/1629/07/16

Please refer to example below for details:

1. Orders

- a. Active order confirmations will be sent to the user as per normal.
- b. The Active Order Sequence number sent is an official record of the receipt of the active order, and can be used to cancel or replace the active order.
- c. When logging out, the setting "Delete orders on lost connection" is enabled by default, regardless of the user's login message. Therefore any log out, or lost connection will result in all the users active orders being cancelled from the order book.
- 2. Matching of active orders
  - a. Active orders placed by the users which result in a match will be cancelled, and a new "physical" copy of this active order will be issued.
  - b. The above means that a new active order sequence number will be generated, and sent to the user, and this active order sequence number will be recorded as the matching active order.
  - c. An active order delete message (123) will be sent for the previous active order.
  - d. Consider the below example:
    - i. Active Order is placed to Buy 100 DEC ALSI at 2500
    - ii. In reply active order sequence number 1 is returned by the exchangeiii. Another user then trades this active order.
    - iv. A 123 Delete message will be sent for active order sequence number 1
    - v. A new physical copy of this active order will be recorded in the database, and a 123 insert message for sequence number 2 will be sent to the user, with a copy of the details from sequence number 1.
    - vi. A 123 insert message for completed order, deal and/or position will be returned to the user.
    - vii. A 123 delete message will be sent for sequence number 2, to indicate that it has matched.

### 4.19 Market Shard Implementation – from Version 2.1

In order cater for higher order throughput on the NUTRON exchange system, multiple instances of the trading system will be deployed. As a result multiple trading engine shards per market will host different instruments. This has no impact to message processing for the user, besides the impact to the depth re-request message (message type 3).

The market depth data message (Display Update Message Type 59) currently contains a Global Sequence Number. This is a sequential message for display updates for a particular market. With the introduction of market shards, this global sequence number changes its scope to **be sequential per market shard**.

The depth re-request message allows the user to re-request market depth data for a market. With the introduction of multiple shards, this now means that data will be returned per market shard, and the re-request message is required to change to facilitate the request per market shard.

The market shard number in the re-request message will identify the market sub set on which particular contracts can be found. This will match up with the market shard number on the Instrument Data download, and therefore Instruments can be mapped accordingly to a particular market shard.

PLEASE NOTE: The exchange may at any time change the market shard definition of an instrument, and it is the users responsibility to handle this change without prior notice by the exchange, by referring to the correct shard number in the Instruments Data Download. A change like this will typically be facilitated overnight with relevant notification given.

On go live of the solution it is envisaged for the Equity Derivatives Market to consist of 3 shards, while the Commodities Market will remain as a single trading engine for the time being.

Note regarding sequence number used for 123 messages

To avoid duplication of sequence numbers for transactional data (i.e. Active Orders, Deals, Completed Orders, and Unmatched) across different shards, the sequence number used for each of these data files will begin in a separate range from other shards. This will be done by ensuring the above file types are sequenced by their shard number \* 100 000 000.

e.g. Active orders for contracts on shard 3 will have sequence numbers in the range of  $300\ 000\ -399\ 999\ 999$ . And completed orders on shard 1 will have sequence numbers in the range of  $100\ 000\ -199\ 999\ 999$ .

If at any point this range is exhausted the range will restart from shard number \* 100 000 000.

# 5. Log In Process Message

### 5.1 Establish a connection to the market

Refer to Section 4.2 for protocol details.

The user must create a TCP/IP socket and attach this to the listening market, using the appropriate IP Address and Port number. This connection must be maintained throughout the life cycle of the session. Any break in this connection would be seen as an irregularity in the system and the user would be removed from the market at the exchange's end.

# 5.2 Market encryption key

When the system accepts a new connection a message (type 16) will be generated and sent to the user who established the connection. This message contains the normal headers. The data part of the message contains a key for the session.

### 5.3 Sending the login message

When the session key is obtained the user can send their login message. The structure of this message is defined in section **7.1.2 Log in Message**. An example of this log on message is provided in table 2.1.

# Table 2.1

Field	Example	Description
Working Directory	C:\Derivtrading\	The working/running directory of the application. This is used for tracking and user assistance.
Company Code*	APIUSER	The code of the company developing the software that is logging in. The exchange will assign this code to the developing software company after conformance test.
Version*	1.0.0.1	The version number of the application. This is user defined.
View All Dealer Data*	1	Compliance officers of a member firm can use this to get information on data for other dealers in the firm.
		If this is set to true the user logging in will receive all deals, orders, completed orders and unmatched deals from all dealers in the member firm
Delete Orders on lost connection**	1	If this field is set, the system will delete all orders when a socket error is received from the user.
		* This is not needed for Information subscribers.
Encrypted password*	#@\$#@\$	See description below.
Active Directory User Name*	APIUSER	See description below.
Domain*	JSE	See description below.

Appendix K - JSE Derivatives Trading System API <u>Document.docJSE Derivatives Trading System API</u> <del>Document v2.1 rev2.doc</del>

<u>2/11/17<del>2/11/17</del> <u>4/08/16</u>29/07/16</u>

#### 5.3.1 Encrypted Password, User Name and Domain

- The Encryption Key Buffer is made up of:
  - Session key + Member code + Dealer code + Password
- The Data Buffer is made up of:
  - Member code + Dealer code + Session key
- The encryption key is used to encrypt the data, which is then sent in the Encrypted Password field.
- The system will reply with a login acceptance message. (Refer to Message type 1) if authentication succeeds.
- If the system does not authenticate the user an error message will be sent. The user is then restricted to only changing their password. After the user has done this successfully, they can login again using the same session key.

When encrypting the password it is important that the buffers used to hold the key and data are 0 filled for unused characters, as the blowfish algorithm uses block sizes of 8 bytes. Thus a password of length 11 will encrypt to 16 bytes, and the 5 unused bytes need to be null or 0. No string encoding should be performed on either the Encryption Key Buffer, Data Buffer or resulting Encrypted Data Buffer – these should be maintained as raw arrays of bytes at all times.

Please note that the data buffer length should be set to a multiple of 8 bytes to cater for the block size of the algorithm, and should be padded with 0 byte values for the complete length. The key buffer length should be kept as the length of the parts which make up the key, and no padding is required.

Please note that the member code and dealer code / user code are applicable to all API users, not only to trading participants. In the message header, the member code field for Information Subscribers must be 'DATA', the user code that the Exchange supplies must be filled into the user code field in the login message.

The password must comply with the following standards:

- Minimum length 8 characters
  - Complexity: Any three of the following four:
    - Uppercase
    - o Lowercase
    - o Numeric
    - o Special character

#### 5.4 I'm Alive

The system will transmit to the API user an '*I'm alive*' message (message 10, **Section 8.5**). This will only be transmitted if no message has been sent from the system to the user in the last 45 seconds, or a pre-configured amount of time set by the Exchange.

The API user must send a Heart beat message (message 84, **Section 7.9**) to the system if there has not been a message sent from the user in the last 45 seconds, or a pre-configured amount of time set by the Exchange.

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

<u>2/11/17<del>2/11/17</del></u> <u>4/08/16</u>29/07/16

# 6. Data Sources

Data can be requested from the system by sending a request message (See 6.3 <u>Requesting</u> <u>DataRequesting Data</u>). A series of compressed message packets will be sent to the user in response to the request. Each of these packets will be preceded with a Transport Header, Message Header and Request Data Header. (See **Section 4.7** for the handling of the response)

In the Request Data Header (**Section 9.1**) the Data Type defines the structure of the data. The size of the decompressed data will be a multiple of the size of the defined structure. This decompressed data can therefore be type cast into a series of records.

Example:

- 1. Request data for MTM File (Type 16)
- 2. Received a complete data buffer of 414 bytes (After decompression).
- 3. Number of records contained = Length of Decompressed Buffer (414) / Size of MTM Structure (46) = 9
- 4. 9 Records returned by Download.

### 6.1 Historical Data

Data can be requested for the previous business day. The Data Request message contains a date parameter, and must be set to download data for the required date.

Table 4.1 contains a reference to data sets available for historical data retrieval.

### 6.2 Error and Information Messages

IT IS SUGGESTED THAT THE API USER ENSURES THAT THE ERROR AND INFORMATION MESSAGE (TYPE 125) HAS BEEN CATERED FOR, AND HANDLED.

These messages are sent to users specifically when;

- An error occurs as a result of a message sent
- When a requested process cannot be completed,
- · When the exchange wishes to make an announcement of any sort.

Certain announcement messages are generated automatically by the system, for example, warnings on market open, auction start, etc. These messages contain an integer field indicating the error number, this is followed by a byte field indicating if the message is an error message or a information message. These fields are followed by the messages in text format. The exact text of the message may vary as the message may include contract information.

(Refer to Error and Information Messages see Section 11)

### 6.3 DOS Date Format

This format is the compressed DOS 2 byte date (ISO 8601 MS theta-1980) consisting of 16 bits where the day is stored in bits 0-4, the month in bits 5-8, and the year, with base of 1980, is stored in the remaining bits.

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Day	Day Month							Year							

Page 42

 Appendix K - JSE Derivatives Trading System API

 Document.docJSE Derivatives Trading System API

 Document v2.1 rev2.doe

Formatted: Font: Bold

This is the equivalent of a small integer (date).

The standard formula for calculating a DOS date format is:

todaydate = ((Year - 1980) \* 512) + (Month \* 32) + (Day);

The formula for decoding the dos date is:

```
int day = date & 0x1F;
int month = (date & 0x1E0) >> 5;
int year = ((date & 0xFE00) >> 9) + 1980;
```

### 6.4 Requesting Data

There are several different data retrievals that have a data type associated with them. Once the data has been requested a 36 message(s) is returned with the requested data. See **Section 4.7.** 

To obtain a data download, 256 is added to the Data Type field. For example referring to the 36 message above the Data Type for Active Orders is a 5. A 36 request for a Data Type 261 will be sent to download the Active Orders data.

### 6.5 123 Messages vs. 36 Messages

The 123 and 36 Messages are received when downloading or receiving private and public data from the exchange.

Updates or inserts are received intra-session with message type 123, which always contains only one record.

When an input message 36 is sent; messages containing multiple records can be received.

NOTE: Data retrieved when input message 36 is sent is identified by the Data Type + 256, whereas Data received via the 123 message is identified by Data Type without the 256 addition.

#### Example:

When a 36 Message is sent to the exchange containing data set Number 257 (Market Display), multiple records will be received.

During the trading session a 123 Message (Data Update) can be received containing data type indicator Number 1 (Market Display). This will only contain one record, an insert, update or delete for the display data.

Example:

On a Report only Deal insert message, the user would receive a 123 message with indicator set to unmatched and action set to insert.

# 6.6 Market Display data

To facilitate the ease of trading, a data set is available through the API specification that contains the entire set of contracts available for real-time trading on each market. The Market Display data contains all relevant links of each contract (Instrument, Date and Strike Sequences. See **Section 6.6**). The market display data also contains the information for that contract that is relevant for trading of the contract in the current market session.

The data set structure is available for retrieval as a Message 36 in Request Data Header – Message Type 36 and 123.

# 6.7 Instrument, Date and Strike Sequences

The system defines contracts by an Instrument, Date and Strike Sequence. These are all linked (Display Data Set) and together define a contract. Each sequence refers to a specific record within a data set that holds information about a specific Contract. For example the instrument sequence number can be linked to the instrument data set, and the instrument data set contains all the relevant information of that instrument.

Each combination of instrument, date and strike sequences is an individual and unique contract.

The **Instrument** refers to the underlying type. These values contain information about the instrument.

The **Date** refers to the expiry in the Contract. This contains information that is specific to this expiry date.

The **Strike** refers to the option on the Contract. If the strike sequence is zero the contract is a Future, otherwise the contract is an Option. The strike contains the information for the option or delta.

Example table of instrument, date and strike sequences used:

INSTRUMENT	DATE	STRIKE	CONTRACT CODE	DESCRIPTION
ALSI IS 1	DEC 2006 CS 1	SS 0	FZ615 ALSI	Future
ALSI IS 1	DEC 2006 CS 1	1500 Put <b>SS 1</b>	YZ615 ALSI 1500 P	Option
ALSI IS 1	DEC 2007 CS 2	1500 Call SS 2	YZ715 ALSI 1500 C	Option
ALSI IS 1	DEC 2007 CS 2	SS 0	FZ715 ALSI	Future
FBWC <b>IS 2</b>	DEC 2006 CS 3	SS 0	FZ615 FBWC	Future
FBWC <b>IS 2</b>	DEC 2006 CS 3	1500 Put <b>SS 3</b>	YZ615DFBWC 1500 P	Delta Option
FBWC <b>IS 2</b>	DEC 2007 CS 4	1500 Call <b>SS 3</b>	YZ715DFBWC 1500 C	Delta Option
FBWC <b>IS 2</b>	DEC 2007 CS 4	SS 0	FZ715 FBWC	Future

The date sequence 1 is connected to the ALSI instrument and is a date of the ALSI. The FBWC instrument will have its own set of date sequences. Data sequences are not interchangeable on instruments as they contain information relating to an instrument for the expiry.

Complex instruments are linked in a similar fashion. An extra set of sequence numbers is available in the Market Display data set called Second Instrument Sequence and Second Date Sequence, using the table below and the following complex instruments will be created by the system:

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

INSTRUMENT	SECOND INSTRUMENT	DATE	SECOND DATE	Strike	CONTRACT CODE	DESCRIPTION
ALSI <b>IS 1</b>	ALSI IS 1	DEC 2006 CS 1	DEC 2007 CS 2	SS 0	ZZ6Z7 ALSI	Spread between DEC 2006 and DEC 2007 ALSI
FBWC IS 2	FBWC IS 2	DEC 2006 CS 3	DEC 2007 CS 4	SS 0	ZZ6Z7 FBWC	Spread between DEC 2006 and DEC 2007 FBWC
ALSI IS 1	FBWC IS 2	DEC 2006 CS 1	DEC 2006 CS 3	SS 0	XZ6Z6 ALSI/FBWC	Switch between DEC 2006 ALSI and FBWC
ALSI IS 1	FBWC IS 2	DEC 2007 CS 2	DEC 2007 CS 4	SS 0	XZ7Z7 ALSI/FBWC	Switch between DEC 2007 ALSI and FBWC

Contract Inheritance flows from the instrument to strike. Thus the valuation date on the strike will override the expiry date on the contract date.

The contracts available on the market and the sequence numbers that make up the contract are available in the Market Display Data.

# 6.8 Entity Codes

The following Entities used currently exist in the system:

- Member •
  - Members are 5 byte long Pascal type strings 0
  - Example: ABCD 0
  - Dealer •
    - o Dealers are 4 byte long Pascal type strings Example: JOE 0
  - Clients •

•

- Clients are 7 byte long Pascal type strings. 3 Alpha, followed by 3 numeric 0 characters
- Example: CLI001
- Sub-Accounts
  - $\circ$   $\;$  Sub-accounts are 6 byte long Pascal type strings, that do not end in 'C'  $\;$
  - o Example: SUB99
- Clearing Members •
  - Clearing members are 6 long Pascal type strings
  - Clearing members always end with a character C in byte 5 Example: **ABCDC** 0
  - 0

<u>2/11/17</u>2/11/17 4/08/1629/07/16

### 6.9 Contract Character Convention

# 6.9.1 Type Convention

CHARACTER	CONTRACT	POSITION	EXAMPLE
F	Future	1	FG427 ALSI
Y	Option	1	YG427 ALSI 12.13 C
Z	Spread	1	ZG4H4 ALSI
Х	Split / Switch	1	XG4G4 ALSI/INDI
С	CFD	1	CZ_24 ANGC

### 6.9.2 Year Convention

NUMERAL	YEAR	POSITION	EXAMPLE
7	2007	3	JG <b>7</b> 30 JBAR

J	April	2 (+ 4 Spreads)	FJ730 ALSI
К	May	2 (+ 4 Spreads)	FK827 ALSI
М	June	2 (+ 4 Spreads)	FM927 ALSI
Ν	July	2 (+ 4 Spreads)	YN527 ALSI 15000 C
Q	August	2 (+ 4 Spreads)	FQ730 ALSI
U	September	2 (+ 4 Spreads)	FU404 ALSI
V	October	2 (+ 4 Spreads)	FV404 ALSI
Х	November	2 (+ 4 Spreads)	F <b>X</b> 427 ALSI
Z	December	2 (+ 4 Spreads)	F <b>Z</b> 721 ALSI

### 6.9.4 Day Convention

Note: When the contract code refers to a complex instrument (referring to 2 contracts), the 'day' field is not used. This is retrieved from the underlying contract dates that make up the complex instrument.

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

CHARACTER	DAY	POSITION	EXAMPLE
XX	27	4 & 5	FG4 <b>27</b> ALSI
(where XX equal			
days of the month			
and XX is <= to			
31)			

### 6.9.5 Contract Code Description and Implementation

The contract code will be presented in the following format in all contract code fields. The format is give as:

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
%	Т	М	Y	D	D	d	С	С	С	С	S	S	S	S	S	S	S	S	С

% - Length of the contract code string

- T Instrument Type (See 6.9.1)
- M Month Character (See 6.9.3)
- Y Year Character (See 6.9.2)
- D Day Characters (See 6.9.4)
- d Delta Option indicator
- C Instrument Name
- S Strike Value
- c Call or Put Indicator

The following are some examples:

## 6.9.5.1 Future Contract (May 2007 ALSI)

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
10	F	Κ	7	2	1		Α	L	S	-									

# 6.9.5.2 Naked Option Contract (May 2007 ALSI 26 000 Call)

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
19	Υ	Κ	7	2	1		А	L	S	Ι	2	6	0	0	0		0	0	С

# 6.9.5.3 Naked Option Contract (May 2007 TKGQ 2.53 Put)

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
19	Υ	Κ	7	2	1		Т	Κ	G	Q	2		5	3	0	0	0	0	Ρ

# 6.9.5.4 Delta Option Contract (May 2007 CDAG 25 603.65 Put)

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
19	Υ	Κ	7	2	1	D	С	D	А	G	2	5	6	0	3		6	5	Р

# 6.10 Origin field Descriptions

The Origin field is an indicator of the process that was followed which caused an unmatched trade, trade or completed order. For example if the origin is Accumulate it then indicates that the trade is the result of an accumulation.

NAME	CHARACTER	DESCRIPTION	DESCRIPTION				
	E Derivatives Trading System Al		Page 47				
Document.doc	SE Derivatives Trading System A	<u>PI 2/11/172/11/17</u>					
Document v2.1 r	<del>ev2.doc</del>	<u>4/08/16</u> 29/07/16					

None	' ' – byte 32	No activity recorded on trade
Accumulate	A	Trade Accumulation occurred with this trade as
/ loodinidiate	~	result
Principle Change	D	A trade was split with a change in the principle
i intelpto offattigo	-	from the original
Assign Send	Q	This trade has been assigned
riceigir e eria	~	This trade cant be accumulated, assigned or
		split again
Assign Receive	F	This trade is a result of a trade that was
Ũ		assigned to another party, and this is the
		opposite leg generated.
Rolling forward	R	This trade is a result of a roll forward on a
position		position.
Tripartite Receive	Т	This trade is the result of a tripartite allocation
		forward leg.
On Screen	0	This trade is the result of an On Screen trade
Report Only	Р	This trade is the result of report only trade that
		occurred
Sub Account	S	This trade is the result of a sub-account
Modification		modification
Option Exercise	E	This trade is the result of a option exercise
Option Abandon	B	This trade is the result of a option abandon
Tripartite Send	W	This trade was allocated to the client of another
		member.
		This trade cannot be assigned, accumulated,
		split or used in another tripartite allocation
Allocate Send	L	The trade was used in a split transaction.
		This trade cannot be accumulated, split again,
Allocate Receive	Μ	used in a tripartite allocation or assigned. This trade is the client's leg of a split or
Allocate Receive	IVI	allocation. This trade cannot be split again.
Corporate Action	С	This trade is the result of a corporate action.
Sub Account	<u>с</u> Н	This indicates that a sub account has been
Change	П	changed on a trade leg.
Allocation Error	G	This indicates that this trade has been corrected
	0	as the client was incorrect
Allocation		This indicates that this trade is a correction trade
Correction		for a client trade which was booked incorrectly
Principle	N	This indicates that this trade is a correction trade
Correction		for a client trade that was booked incorrectly and
		subsequently moved back to the member's
		account.
Transfer	K	Indicates this trade was as a result of a transfer.
Report Only After	8	Is to be used for input purposes only when
Roll		reporting Roll Over Trades. Please see
		"Reporting Roll Over Trades" (pg 53) for
		additional details.
Report Only	U	Origin indicates the trade is a report only
Correction		correction.
Report Only	V	Origin indicates the trade is a report only
Cancellation		cancellation

# 6.11 Reason field Descriptions

The Reason field is an indication of why an unmatched trade is booked.

# 7. Input Messages

# 7.1 Connection Messages

### 7.1.1 Encryption

The encryption method used is Blowfish. The following URL can be referenced for example and explanations for the blowfish encryption methodology.

# http://www.schneier.com/blowfish-download.html

Encryption is required in the following two scenarios:

- When the API user sends a Login Message (Message Type 0) •
- When the API user sends a Password Change Message (Message Type 88) •

The encryption algorithm uses the following values:

- Hash Mode: Sha1
- Cipher Mode: Blowfish is a variable-length key block cipher •
- Block size: 8 bytes 64 bits •
- Max key: 56 bytes 448 bits •

Test vectors are available on the following website for testing purposes: http://www.schneier.com/code/vectors.txt

# Some samples from this website include:

Key Used	Bytes Encrypted	Encrypted Bytes

						connection from the exchange
Encrypted password*	24	В	N	n/a	"@!#%@#"	See description below
Active Directory User Name*	255	Ρ	AN	n/a	APIUSER	The Active Directory user name assigned to you by the exchange
Domain*	255	Ρ	AN	n/a	JSE	The domain name assigned to you by the exchange.

Total Length: 821 Bytes

Encrypting the password:

- The Encryption Key Buffer is made up of:
  - Session key + Member code + Dealer code + Password
  - The Data Buffer is made up of:
    - Member code + Dealer code + Session key
    - The encryption key is used to encrypt the data, which is then sent in the **Encrypted Password** field.

# 7.1.3 Log out Message – Message type 4

- This message does not contain any details.
- The exchange will log the user out of the market, and if "Delete Orders on Lost Connection" is selected in the login message, all active orders on the market would be deleted.
- 7.1.4 Re Request Message type 3

Re Request of 59 messages. The Display Update (Message Type 59) contains the sequence numbers required to facilitate this request. The From Sequence and To Sequence are both inclusive in the result set. The exchange will reply in result sets of 100 sequences at a time, for the supplied sequence number range.

When the user is disconnect, and re-connects they are advised to re-request missing messages starting with the last global sequence number received. This is to ensure that any updates to the last global sequence number received are taken into account.

The user is also advised that live messages should be received in conjunction with the response to re-requests. This is to avoid missing live messages whilst re-requests are being received.

It is also advised that if a sequence number is received out of order, the user should build functionality that manages any triggers for re-request. This functionality could potentially make use of a counter that only after 3 checks, triggers a re-request for a missing sequence number. This will cater for the possibility that a sequence number is received out of order due to message routing or other factors, and allow the user to ensure all data is received in good order.

The market shard number will identify the market sub set on which particular contracts can be found. This will match up with the market shard number on the Instrument Data download, and therefore Instruments can be mapped accordingly to a particular market shard. PLEASE NOTE: The exchange may at any time change the market shard definition of an instrument, and it is the users responsibility to handle this change without prior notice by the exchange.

Name	Length	Туре	Description	Case	Example	Comment
From Sequence*	4	I	Ν	n/a	12	From this sequence number
To Sequence*	4	I	N	n/a	112	To this sequence number
Market Shard Number	4	I	N	n/a	1	Indicates the market shard number on which you would like to re- request data from.

Total Length: 12 Bytes

7.1.5 Password Change Message – Message type 88

The password encryption works similarly to the login password except that the new and old passwords are the encrypted data that is transferred.

The following are NOT length prefixed:

- Session Key
- Member Code
- Dealer Code
- Old Password
- New Password
- Key Buffer
- Data Buffer
- Encrypted Result

The process is as follows for encrypting the old password.

- Key Buffer: Session key + member code + dealer code + old password
- Data Buffer: old password
- o The encrypted result is then sent in the Old Password field.

The process is as follow for encrypting the new password.

- Key Buffer: Session key + member code + dealer code + old password
- Data Buffer: new password
- $\circ$   $\;$  The encrypted result is then sent in the New Password field.

Name	Length	Туре	Description	Case	Example	Comment
Old Password*	24	В	AN	n/a	@@#*%	The previous password
						in encrypted format.
New	24	В	AN	n/a	%%@&\$	The new password in
Password*						encrypted format.
Active	255	Р	AN	n/a	APIUSER	The Active Directory
Directory User						user name assigned to
Name*						you by the exchange.
Domain*	255	Р	AN	n/a	JSE	The domain name
						assigned to you by the
						exchange.

Total Length: 558 Bytes

## 7.2 Subscription Messages

7.2.1 Unsubscribe Contract – Message type 42

To inform the system that the user no longer wants to receive Display Updates on a particular contract, a user must send a Message Type 42 with the list of contracts that they wish to

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

unsubscribe from. This message caters for up to 40 contracts per message. To unsubscribe to all options on the market, the message can be sent with a quantity of 1 and an empty list of contracts.

Name	Length	Туре	Description	Case	Example	Comment
Quantity*	2	I	N	n/a	3	Number of contracts to unsubscribe from.
Contracts to unsubscribe*	40*20	Ρ	AN	U	FG603 ALSI, FG603 INDI, FG603 FINI	List of contracts names to unsubscribe from

Total Length: 802 Bytes

7.2.2 Option Contract Subscription – Message type 67

Sending this message type will result in the API user receiving Display Updates (Message Type 59) on the contracts listed in the Option Contract Subscription Message.

The following scenarios are catered for:

- If the message contains the future contract the user will be subscribed to all option strikes' depths on the future expiry.
- If the message is empty all the options on the market on which an order has been placed, will be subscribed to.
- If a single option is specified only this contract will be subscribed to.

When subscribing to a contract using the 67 message, further updates will be sent when activity is recorded on that contract. To receive an initial state of the contract in terms of market statistics the display file will contain the latest information for this contract. It is advised that the information in the display data download is used as an initial state of the contract, and that the 67 message is used to subscribe to further updates.

Name	Length	Туре	Description	Case	Example	Comment
Contract Name*	20	Ρ	AN	U	FG503 ALSI	See explanation above for implementation.

Total Length: 20 Bytes

7.2.3 Future Contract Subscription – Message type 99

Sending this message type will result in the API user receiving Display Updates (Message Type 59) on the contracts listed in the Future Contract Subscription Message. Up to 40 contracts are catered for in this message.

For the agricultural market, subscription to silo receipt spot trading display updates is possible by product only. This is done by listing a normalized contract name for the product, for intance: to subscribe to all white maze silo receipt spot contract updates, specify the contract name as follows:

B00000WMAZ

Name	Length	Туре	Description	Case	Example	Comment
Quantity*	2	I	N	n/a	2	The number of contracts for request.
Contracts Requested For Display*	40*20	Ρ	AN	U	FG625 ALSI, FG612 INDI	This field displays all the contract names that have been

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

<u>2/11/17<del>2/11/17</del></u> 4/<u>08/16</u>29/07/16

[			req	uested.

Total Length: 802 Bytes

7.2.4 Option Statistics Request – Message type 135

The Option Statistics Request allows a user to receive a Display Update (Message Type 59) which will include information for all option contracts traded since the beginning of the trading session. Therefore statistics included in the Display Update Message such as volume, last price, days high and days low will be filled with the details for option contracts traded.

The contract name field of this message should be left empty when sending this request.

Name	Length	Туре	Description	Case	Example	Comment
Contract Name*	20	Ρ	AN	U		See explanation above for implementation.

### Note regarding subscription and global sequence number

When subscribing to an update on a contract, the resulting 59 message will contain a global sequence number of the last global sequence number sent, and will not increment. Therefore 59 messages received as a reply to a subscription message (message type 99) should not be used as part of any global sequence number processing, as these updates do not fall in line with the normal sequence number series. Any subsequent 59 messages after subscription has been processed will continue with the normal global sequence number series.

### 7.3 Order Insert/Suspend/Cancel Messages

### 7.3.1 Suspend/Delete Active Order Message – Message type 8

The Suspend Order message informs the system to either suspend or delete the order with the specified exchange order sequence. The activity (suspend or delete) is controlled by the suspend / delete flag in the message. This message should be used for suspending or deleting orders which are currently on the order book as active.

Name	Length	Туре	Description	Case	Example	Comment
Exchange Order Sequence*	4	I	N	n/a	2563	Sequence number of order to suspend or delete
Contract Name*	20	Ρ	AN	U	FG503 ALSI	Name of contract on which order will be suspended. Only used for suspending an order.
Buy or Sell*	1	С	A	U	В	Indicates whether the order being suspended/deleted is a Buy(B) or Sell(S)
Suspend/Delete Flag*	1	С	A	U	S	S – Suspend, D - Delete

Total Length: 26 Bytes

7.3.2 Delete Order Message – Message type 15

The Delete Order message allows the user to delete an order with the specified exchange order sequence which are either currently suspended or active. This message should be used

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Decument v2.1 rev2.doc 4

for deleting orders which are currently suspended. This message cannot be used to delete orders which are currently active.

Name	Length	Туре	Description	Case	Example	Comment
Exchange	4	I	Ν	n/a	6262	Order Sequence
Order						number of order to delete
Sequence*						
Contract	20	Р	AN	U	FG503	Name of the contract
Name*					ALSI	which you would like
						to delete

Total Length: 24 Bytes

7.3.3 Resubmit Order Message – Message type 27

The Resubmit Order Message allows a user to resubmit a particular order with the specified order sequence number. This will submit the order onto the live trading screen, and a subsequent display update will be returned, if an error does not occur.

Name	Length	Туре	Description	Case	Example	Comment
Order Sequence number*	4	I	N	n/a	100015	Order Sequence number of suspended order to be resubmitted. This will make the suspended order an active order.
Contract Name*	20	Ρ	AN	U	FG503 ALSI	Name of the contract on the order which you would like to resubmit.

Total Length: 24 Bytes

### 7.3.4 Order Insert Message – Message type 56

- Order messages are stacked and 11 orders can be inserted on different contracts in one message.
- The message is preceded with a number of orders and a first order message, followed by the other orders that can be inserted.
- The following fields apply to all orders:
  - Order Principal
  - Order Type
  - User Member
  - o User Dealer
  - o Order Timeout
  - o Cancel Flag
- The number of orders indicates the total orders to be inserted including the first order.

Exception Handling:

•

 When processing multiple order entries in this message, each order will be validated individually and processed. Order rejection messages (message type 126) will be returned for each order which is rejected, with an indication of the order reference and the error number and message. Orders which are successfully processed will be acknowledged with the appropriate file update message (message type 123).

### Order message makeup

2	Cancel all orders for this principle currently on this contract, on the specified buy or sell stack

# Order Type Definitions

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading-System API Document v2.1 rev2.doc

<u>2/11/17<del>2/11/17</del></u> <u>4/08/16</u>29/07/16

- Iceberg Order The bid message has place for a quantity and Iceberg Quantity. When the Iceberg Order Type is selected an order with Quantity 10 and Iceberg Quantity 100, an order will be place on screen for a quantity of 10, and when hit, an order will automatically be submitted for a further 10 contracts, when this is hit another order will be submitted automatically etc. until the Iceberg Quantity of 100 is reached.
- At Best Order This order takes no price, and an order will be submitted onto the exchange automatically at the best price on top of the stack. The order price will follow the best price until completely satisfied.
- Stop Order This is an At Best Order and will follow the best price. If the market price goes below the stop price specified in the price field of the order message, the order will automatically be pulled.
- All Or Nothing This is an order which must be completely satisfied before it is removed from the stack. An order can therefore be submitted onto the system and will remain until completely satisfied.
- At Close Order This order is placed onto the system and only appears at market close. At the close of on screen trading period, all at close order orders are submitted onto the market and matched if possible.

### 7.3.5 Cancel All Active Orders Message – Message type 85

The Cancel All Active Orders Message allows a user to delete all active orders currently on the market. There are various options for cancelling all orders which are detailed in the Cancel Flag description.

Name	Length	Туре	Description	Case	Example	Comment
Contract Name	20	Р	AN	U	FG503 ALSI	Name of contract to be cancelled. Applicable only when Cancel Flag 0, 1, 2, 3
Cancel Flag*	2	I	N	n/a	4	See explanation below for implementation.
Buy Sell	1	С	A	U	B or S	Buy or sell side to cancel. Applicable only if Cancel Flag not 4.

Total Length: 23 Bytes

Additional user reference	10	Ρ	AN	U	RFW3422	Additional Reference number for new order.

Total Length: 74 Bytes

7.3.9 Edit Active Order By User Reference Number- Message type 161

The edit active order by user reference number message allows users to edit the details of an existing active order with a single message. The exchange will automatically replace the details of the active order with the details supplied in this message.

Note, that the order sequence number is not required in this message, and therefore allows the user to edit the details of an active order without requiring the acknowledgement from the exchange of the active order.

Name	Length	Туре	Description	Case	Example	Comment
Contract Name*	20	P	AN	n/a	FG625 ALSI	Contract of order to be edited. This must remain the same as the original order
Buy Or Sell*	1	С	A	U	B, S	This indicates whether the suspended order being edited is a Buy(B) or Sell(S). This must remain the same as the original order.

						order.
User Reference*	10	Ρ	AN	U	RFW3422	Reference number of the order that the user wants to edit.
Additional user reference	10	Ρ	AN	U	RFW3422	Additional Reference number for new order.

Total Length: 70 Bytes

7.3.10 Cancel Order By User Reference Number- Message type 162

The cancel order by user reference number message allows the user to cancel an active order by sending the user reference number of this order as the index. This allows users to cancel active orders without requiring the acknowledgement from the exchange of the active order.

Please note this message can also be used to cancel spot basis active orders.

Name	Length	Туре	Description	Case	Example	Comment
Contract Name*	20	Ρ	AN	n/a	FG625 ALSI	Contract of order to be cancelled. This must remain the same as the original order
Buy Or Sell*	1	С	A	U	B, S	This indicates whether the order being canceled is a Buy(B) or Sell(S). This must remain the same as the original order.
Dealer Code*	4	Ρ	AN	U	ABC	Dealer code for order. This must remain the same as the original.
Member Code*	6	Ρ	AN	U	AABB	Member code for the order. This must remain the same as the original order.
User Reference*	10	Р	AN	U	RFW3422	Reference number of the order that the user wants to cancel.

Total Length: 41 Bytes

7.3.11 Edit order price by Active order sequence number- Message type 171

The edit order price by active order sequence number allows the user to adjust the price of an active order, and have the existing order details remain the same. This would be useful for users who wish to adjust the price of an order on the order book despite any previous executions already concluded on that order.

Name	Length	Туре	Description	Case	Example	Comment		
Contract Name*	20	P	AN	n/a	FG625 ALSI	Contract of order to be cancelled. This must remain the same as the original order

# 7.4 Report Only Messages

# 7.4.1 Split Deal Message – Message Type 22

The Split Deal Message allows a user to allocate a particular portion of a deal to a specified principle and/or sub account. The User Reference field allows the user to indicate what the user reference the resultant deals should have. It is important to consider the rules regarding principle / agency deals when allocating a deal. Deal legs with a Principle (P) capacity can be allocated at a different price to the original deal, however, deal legs with an Agency (A) capacity cannot.

It should be noted that the Split Deal Message is used for client or subaccount allocations. The Assign Deal Message is to be used for assigning trades to other members in the market.

Name	Length	Туре	Description	Case	Example	Comment
Deal Sequence*	4	1	N	n/a	3633	The deal sequence number to be allocated.
Quantity*	4	1	N	n/a	5	The quantity to be allocated.
Principal*	8	Р	AN	U	ABC242	The principal to which the deal is allocated.
Dealer*	4	Р	AN	U	ABC	The dealer who has done the allocation.
Price*	8	D	N	n/a	19345.50	The price at which the allocation is done.
Sub account	6	Ρ	AN	U	ABC23	Sub account code to record the allocation with.
User Reference*	10	Ρ	AN	U		Allows for a user reference to be allocated to the allocated deals

Total Length: 422 Bytes

- 7.4.3 Edit Report Only Deal Message type 26
  - Please see 7.4.4 for the structure of this message. This structure is the same as the unmatched deal structure, with the unmatched sequence being the unmatched deal sequence already booked. The details captured in this message will be used to modify the existing details of the specified unmatched sequence.

### 7.4.4 Insert Report Only Deal – Message type 28

The Insert Report Only Deal Message allows a user to capture a Report Only trade onto the market. A few important notes are to be considered with regards to the Counter party field on this message:

- If the counterparty field is a client code. The opposite leg of this transaction will automatically be booked, and matched.
- If the counterparty field is another member code, the opposite leg of this transaction
  will automatically be booked, and sent to the counterparty if the indicator "Single Leg"
  has been set to false. In this scenario the counterparty will receive a leg which is
  equal and opposite to that which the user captured, however, the price and rate fields
  of this leg will be 0. The counterparty will need to edit the unmatched leg (Message
  Type 26) before the match will take place. This allows the counterparty and user to
  agree on the price and/or rate of the transaction.

To confirm the entry of the unmatched trade before a match takes place, the Buy Sell field can be sent with a lower case b or s. This will allow the user to first accept (Message Type 40) the trade, before the match takes place.

The exchange has a limitation on the time in which 2 legs of a reported trade should match. This is usually in the region of 6 minutes.

The message layout for this message will use the same layout as that for message type 29 below.

7.4.5 Other Reported Transactions – Message type 29

### Reporting Allocation Corrections

Allocation corrections allow a user to correct the principle code on a trade when the principle is a client code. This gives the user the opportunity to book a reported trade to move the trade to the correct client, or back to the member's account without incurring additional booking fees.

To report a trade which is an allocation correction the user must supply the following fields:

- Assign Sequence This must be filled with the Deal Sequence number of the trade to be corrected.
  - b. Reason This must be filled with the reason code 'L' Allocation Correction.

This will update the original trade with a deal origin of 'G' – Allocation Error, and will capture a new trade with the deal origin of 'l' – Allocation Correction. The Principle supplied should be the client code on the trade which you wish to correct, and the Counterparty supplied should be the client to which the trade should belong to. If you wish to move the trade to the members account, the Principle supplied should be the member's account, and the Counterparty supplied should be the fields should be the client code which you wish to correct. The remainder of the fields should be captured as normal when reporting a trade to the exchange.

### Reporting Roll Over Trades

If the user would like to report a roll over trade, i.e. a trade which reports a leg on the current expiry, and the opposite leg on a later expiry, the report only trade message can be used for this purposes.

It is important to note the difference between the "Roll Position" and this "Roll Over Trade" functionality. In the "Roll Over Trade" functionality there is no need to specify the link to an existing position. The "Roll Over Trade" functionality works as follows:

- A report only trade is captured for the current expiry against a selected counterparty. This trade is captured as any other normal report only trade. To indicate that this is a "Roll Over Trade", the Origin field in the message should be populated with the Origin "R" – Rolling Position.
- 2. A report only trade is then captured for the later expiry against a selected counterparty. This trade is captured as any other normal report only trade, and the origin should be "8" Report Only After Roll. PLEASE NOTE, that failing to specify this origin when reporting a roll over trade will result in the Report Only leg of the trade occurring supplementary fees. It is also important to note that the Origin "Report Only After Roll" is only for input use. The resulting trade confirmation message will indicate "P" Report Only.

It is important to note that the Origin "R" – Rolling Position, will only be accepted on the current expiry.

## Reporting Trade Cancellations And Trade Corrections

When a user would like to cancel a trade, they can make use of the report only trade capture to cancel an existing trade. This is done by completing the details of a report only trade message with the same details as the original trade (except the Buy Sell is reversed). The origin on the report only message should be 'V' – Report Only Cancellation, and the Assign Sequence field should be filled in with the Deal Sequence number of the original deal. The

Appendix K - JSE Derivatives Trading System API <u>Document.docJSE Derivatives Trading System API</u> <del>Document v2.1 rev2.doc</del> counterparty on this message should be left empty, as the counterparty may not be known for onscreen transactions.

If the user would like to correct a trade, they are required to send the Report Only Cancellation (as above), and then follow it with a further report only message with the details of the corrected trade. In this message the origin should be 'U' – Report Only Correction.

Total Length: 62 Bytes

7.4.9 Unmatched Deal Accept – Message type 40

The Unmatched Deal Accept Message allows a user to accept a specified unmatched deal record. A deal must either have a lower case Buy Sell field for it to be accepted. When an unmatched deal is accepted and matches the counterparties leg of the unmatched deal, the unmatched deal will be deleted, and the relevant deal, completed order and position updates will be received. If the unmatched has not been matched, only an update will be received.

Name	Length	Туре	Description	Case	Example	Comment
Unmatched deal Sequence number*	4	I	N	n/a	1000015	Unmatched deal sequence number of unmatched deal to be accepted
Contract Name	20	Ρ	AN	U	FG503 ALSI	Name of the contract on which the unmatched deal was booked.

Total Length: 24 Bytes

7.4.10 Tri-part Deal Entry - Message type 62

Please refer to 7.4.4 for the message structure.

The purpose of this message is to allocate a deal to a client of another member. The unmatched message structure filled for this operation should be filled with the following specific information:

- Assign Sequence This should be the Deal Sequence number of the deal which is to be allocated.
- Counterparty This field should be filled with the client code of the other member to which the deal specified in the Assign Sequence is to be allocated to.

The unmatched message structure should therefore be filled with the information of the selected deal, specified by the deal sequence. The price and rate field allow the user to

allocate the deal at a defined price and/or rate. The message also allows for the user to specify a new reference number for the resultant trade legs.

The deal specified in the Assign Sequence will be updated with an Origin of Tripartite Send. Once the counterparty's member accepts the trade, new trade legs will be booked with Origin Tripartite Send.

### 7.4.11 Assign Deal – Message type 64

Please refer to 7.4.4 for the message structure.

The Assign Sequence of this structure must be filled with the Deal Sequence of the deal which the user wants to assign.

The purpose of this message is to assign a deal leg to another member. The unmatched message structure filled for this operation should be filled with the following specific information:

- Assign Sequence This should be the Deal Sequence number of the deal which is to be assigned.
- Counterparty This should be filled with the Member Code of the counterparty to which the deal will be assigned to.

The unmatched message structure should therefore be filled with the information of the selected deal, specified by the deal sequence. The price and rate field allow the user to assign the deal at a defined price and/or rate.

The deal specified in the Assign Sequence will be updated with an Origin of Assign Send. Once the counterparty accepts the trade, new trade legs will be booked with Origin Assign Send. The message also allows for the user to specify a new reference number for the resultant trade legs.

7.4.12 Position Roll Forward – Message type 115

Please refer to 7.4.4 for the message structure.

The Position Sequence to Roll Forward of this structure must be filled with the Position Sequence of the position the user wants to roll forward. The Deal Price field of this structure must be filled with the price the user wants to close the current position at, and the Roll Forward Price field of this structure must be filled with the price the user wants to open the next position on. The Contract field of this structure must be filled with the Contract the user wants to open the next position on, (or Roll the position to).

The unmatched message should be filled with the following specific information other than that specified above:

- Quantity The amount of the current position which should be rolled to the later expiry.
- Buy or Sell The action to be performed on the current expiry. To roll a negative (short) current position. The buy or sell field should be filled with a B (Buy). This will indicate your intention to buy some of your short position and sell into the later expiry.
- Counterparty This should be a member or client in the market which has indicated the intention to be the counterparty to this transaction.

The trades captured to close the current position on the existing expiry will be marked with the Origin "Rolling forward position". The trades captured to open the position on the later expiry will be market with the Origin "Report Only".

7.5 Entity Administration Messages

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

Total Length: 21 Bytes

7.5.2 Change Member Limits – Message type 6

Please see Section 4.12 for details on the rules for using this message type.

The Change Member Limits Message allows users to edit the limits used for trading. Only dealers with Master Dealer privileges will be able to set the subscription of other dealers in the member firm.

PLEASE NOTE: If a blanket limit for a particular instrument type is submitted, any previous instrument specific limits will be removed from the exchange, and replaced with an entry for the instrument type. When this occurs the user is required to re-concile their limits with the exchange. To do this, please submit a File Download Request (Message Type 36) for type 24 (Dealer Risk Value Limits)

7.5.3 Create Client Message – Message type 102

The Create Client Message allows a user to create client accounts or client sub accounts. To create a client sub account, the Master Client's sequence number is filled into the Master Client Sequence field of this structure. This message can also be used to update the details of an existing client. To update a client, the Client Sequence Number is filled in with the particular client, and the Is An Update field set to true (1).

		Туре	Description	Case	Example	Comment
Client - Sequence	4	1	Ν	n/a	2422	For Updates the sequence number of the client is required
Master Client Sequence	4	I	N	n/a	6223	If this client is a sub account for another client, that client's sequence number is required.
Member 4 Sequence*	4	I	N	n/a	267	The sequence number of the member.
Member ( Code*	6	Р	AN	U	ABMN	The member code of the member to which this client is registered
Country 4 Sequence*	4	1	Ν	n/a	-1	Sequence number of the country record to which this client belongs
Client Code	7	Ρ	AN	U	ABC123	Client code for updates to client details. Not used for new client.
	8	В	n/a	n/a		
ID Number*	15	Р	AN	n/a	5504122775089	The ID Number

# 7.5.4 Client Verification message – Message Instr 124

The Client Verification message is reserved for Master Dealers, and allows users to verify the details loaded. Upon verification, the client account can be used for trading. This message can also be used to un-verify a client account by setting the Client Status field to false (0).

Name	Length	Туре	Description	Case	Example	Comment
Client Sequence No*	4	I	AN	n/a	5533	Sequence number of the client record in the exchange data set
Client Principal*	8	Р	A	U	ABC123	Client Code
Client Status*	1	В	N	n/a	1 – True 0 – False	Change client status from TRUE to FALSE or vice versa
Member Code*	6	Ρ	A	n/a	AAAA	Indicates the member code to which the client belongs to.

Total Length: 19 Bytes

## 7.6 Physical Delivery/Silo Certificate messages (Agricultural Market only)

7.6.1 Add Silo Certificate - Message type 129

The Add Silo Certificate Message allows users to load new Silo Certificates.

Name	Length	Туре	Description	Case	Example	Comment
Sequence of	4	-	Ν	n/a	0	When adding a new
Silo						silo certificate this
Certificate						should be zero
Certificate	4	-	Ν	n/a	12348	Silo Certificate
number*						number
Silo Owner	4	-	Ν	n/a	123457	Silo Certificate owner
Sequence*						sequence
Silo Location	4		Ν	n/a	54546	Silo Certificate

<u>2/11/17<del>2/11/17</del></u> <u>4/08/16</u>29/07/16

Sequence*						location sequence
Unused	4	В	n/a	n/a		
Instrument Sequence*	4	I	N	n/a	4564	Instrument table sequence of this certificate
Grade Sequence*	4	I	N	n/a	544546	Grade sequence number
Origin Sequence*	4	I	N	n/a	1346	Sequence of Origin
Member Sequence*	4	I	N	n/a	64	Sequence number of certificate member from member data
Client Sequence	4	I	N	n/a	100	Indicates the sequence number of the client if applicable
Status*	1	С	N	U	N – Not Verified	Status of certificate. Should be marked U on initial entry.
Quantity*	4	1	N	n/a	45	Quantity on certificate
Storages Paid Date*	3*4	I	N	n/a	2006, 7, 23	The Date up until which storage has been paid.
Electronic paper*	1	В	N	n/a	1-True 0-False	Is the certificate paper based
Issued Date*	3*4	I	N	n/a	2006, 5,18	Date on which the certificate was issued.
Original Depositor	50	Ρ	AN	n/a		Name or original depositor
Contract Name	20	P	AN	U	FG503 WMAZ	Name of the current expiry of contract on which you want to load a silo certificate.
Must Deliver Today	1	В	N	n/a	1-True 0-False	Indicates if this certificate must be delivered today.
Quantity Remaining	4	N	Ν	n/a	5	Indicates how many contracts are remaining to be delivered on this receipt.
Date Valid Until	3*4	Ι	N	n/a	2012,05,01	Indicates the good till date for this receipt.
Sub Account	<u>6</u>	<u>P</u>	A	<u>n/a</u>	<u>SUB01</u>	Sub account used for this silo certificate

Formatted Table

Total Length: 157-163 Bytes

1

7.6.2 Edit Silo Certificate – Message type 131

Please see 7.6.1 for the message structure.

7.6.3 Delete Silo Certificate – Message type 136

Please see 7.6.1 for the layout of this message. The certificate number field must be that of the certificate you want to delete.

7.6.4 Verify Silo Certificate - Message type 129

<u>2/11/172/11/17</u> <u>4/08/16</u>29/07/16

Please see 7.6.1 for the layout of this message. Note that the same message is sent for the verification of a silo certificate, as that for a new silo certificate. To verify a silo certificate, the details of the certificate which you would like to verify must be sent in this message with a status field of 'V'. This will indicate your intention to verify the details of the certificate.

## 7.7 Request data retrieval

## 7.7.1 Request data retrieval - Message type 36

The Request Data Retrieval Message allows users to request data from the system. The Data Type field indicates what type of data should be returned. It is important to note that 256 must be added to the specific Data Type in order for the data to be returned. To download a specific record within a data set, the Specific Record field is filled with the sequence number of the record required. The Download Date field allows the user to request data for a specified date. This date can only be set to today or the previous business day. If no data is available for the request, and empty data set will be returned.

Name	Length	Туре	Description	Case	Example	Comment
Data Type*	2	I	N	n/a	5+256 (261, orders)	261 is equivalent to an Orders data download
Last Piece of Chunk	1	В	N	n/a	1	Not used for request
Re-request	1	В	N	n/a	True or false	Indicates if this is a re- request for data
Action	4	1	Ν	n/a		Not used for request
Specific Record	4	1	N	n/a	4664	Allows to download a specific record sequence number and onwards
Download Date*	2	I	N	n/a	12743	Dos Date of days records which must be downloaded

Total Length: 14 Bytes

#### 7.8 Request Daily Trend – Message type 61

The Request Daily Trend message allows a user to request the on screen trade history for a contract for the current trading session.

Name	Length	Туре	Description	Case	Example	Comment
Contract	20	Р	AN	U	FG503	Contract name of the
Name*					ALSI	contract on which you are
						requesting history.

Total Length: 20 Bytes

## 7.9 Heart Beats – Message type 84

This message contains only a header with message type 84. This message must be sent to the system to inform the system of the users open connection. This will allow the system to verify that the user is still connected, and has not lost connection to the system.

## 7.10 Client Margin Multiplication Factor - insert/edit/delete - Message type 150

This message contains the information to set, edit or delete the Client Margin Multiplication factor per instrument.

When a client has an additional multiplication factor set on an instrument, the margining process will add in the extra margin for the client, based on the multiplication factor for the instrument. By default all multiplication factors are set to 100 for all clients across all instruments. This functionality is used to override the defaults set.

This message is used by both Clearing Member systems and Member systems. Member users cannot make the Multiplication Factor higher than what the Clearing Member specified. Clearing Member can set the value higher or lower than that of the member.

For Setting the Member Margin Multiplier (Only Clearing Member users)

- The Client Sequence must be zero.
- All clients belonging to this member will have a Multiplier set to the value specified

For Setting the Client Margin Multiplier (Member and Clearing Member systems)

- The Member code must be set to the member of the client
- The Client code must be set to the client sequence that must be changed.

Process flow for Edit/Insert and Delete:

- If there is no multiplication factor set for the member-client-instrument combination then the record will effectively be a INSERT
- If the member-client-instrument combination does exist an EDIT will occur.
- If the multiplication factor is set to 100 a DELETE will occur on the member-clientinstrument combination.

If the message is accepted a 123 message will be sent with the updated details.

#### 7.11 Spot Trading Silo Certificates (Agricultural Market only)

Dealers can trade Silo Certificates, which have been approved for delivery by the exchange, on a spot market basis. Spot basis trading contracts are defined by the following parameters:

- The product/instrument on the Silo Certificate
- The Silo Location on the Silo Certificate
- The Grade of the grain on the Silo Certificate
- The Origin of the grain on the Silo Certificate
- The Receipt Number on the Silo Certificate.

Spot basis trading contracts follow the following naming scheme:

BXXXXXYYYY

Where:

- B is the identifier prefix for spot basis traded contracts
- XXXXX is the sequence number of the contract, left padded with zero's to a lengh of five.
- YYYY is the short name of the instrument or product on the spot basis contract.

The file structures specific to spot basis trading are the following:

- 1. Silo Certificate Spot Contract Number 120
- 2. Silo Certificate Active Spot Order Number 121
- 3. Silo Certificate Completed Spot Order Number 122
- 4. Silo Certificate Spot Deals Number 123
- 5. Silo Certificate Spot Unmatched Deals Number 124
- 6. Post-Delivery Run Deals Number 126

The input messages specific to spot basis trading are the following:

- 1. Spot Basis Order Insert Structure Message 57
- 2. Suspend/Delete Spot Basis Active Order Message 11
- 3. Delete/Suspend Spot Basis Order Message 19
- 4. Resubmit Spot Basis Order Message 32
- 5. Reduce Active Spot Basis Order Quantity Message 105
- 6. Edit Suspended Spot Basis Order Message 119
- 7. Delete Suspended Spot Basis Order By Sequence Number Message 139
- 8. Split Spot Basis Deal Message 23
- 9. Insert Report Only Spot Basis Deal Message type 166
- 10. Edit Report Only Spot Basis Deal Message type 167
- 11. Unmatched Spot Basis Deal Accept Message type 168
- 12. Unmatched Spot Basis Deal Assign Message type 169

Subscription to public messages/depth updates on spot basis contracts occur by product (see section 7.12.1). Submission of orders, order management operations and deal management operations occur through the normal submission of message structures conforming to the layouts outlined in the sections below.

7.11.1 Spot Basis Trading – Contract subscription mechanism

<u>2/11/17</u>2/11/17 4/08/<u>16</u>29/07/16

Subscription to public messages/depth updates on spot basis contracts occur by product only, by specifying a zero contract sequence number and the desired product. For example, to subscribe to all public messages for WMAZ spot basis contracts send a Future Contract Subscription Message (type 99) with the following contract name: B00000WMAZ.

## 7.11.2 Spot Basis Order Insert Structure - Message 57

Unlike future order inserts(message type 56) \_spot basis orders can only be submitted one per message, of which the structure is shown below.

## Spot basis contract creation

Unlike future contracts, spot basis contracts are created based on market demand. Therefore any spot basis order insert message will actually create a tradable contract if a contract with the defining parameters mentioned in 7.12 does not already exist. The creation of a contract is confirmed to the market with a public file update message of file type Silo Certificate Spot Contract – Number 120

Name	Length	Туре	Description	Case	Example	Comment

Total Length: 75 Bytes

7.11.7 Delete Suspended Spot Basis Order By Sequence Number - Message 139

The Delete Suspended Spot Basis Order message allows the user to delete an order with the specified exchange order sequence which are either currently suspended or active. This message should be used for deleting orders which are currently suspended. This message cannot be used to delete orders which are currently active.

Name	Length	Туре	Description	Case	Example	Comment
Exchange Order Sequence*	4	I	Ν	n/a	6262	Order Sequence number of order to delete
Contract Name*	20	Ρ	AN	U	B00122WMAZ	Name of the contract which you would like to delete

Total Length: 24 Bytes

7.11.8 Edit Spot Active Order By Active Order Sequence Number- Message type 163

The edit spot active order by active order sequence number message allows users to edit the details of an existing spot basis active order with a single message. The exchange will automatically replace the details of the active order with the details supplied in this message.

Name	Length	Туре	Description	Case	Example	Comment
Contract Name*	20	Р	AN	n/a	B00122WMAZ	Contract of order to be edited. This must remain the same as the original order.
Buy Or Sell*	1	С	A	U	B, S	This indicates whether the suspended order being edited is a Buy(B) or Sell(S).

7.11.9 Edit Spot Active Order By User Reference Number- Message type 164

The edit spot active order by user reference number message allows users to edit the details of an existing spot basis active order with a single message. The exchange will automatically replace the details of the active order with the details supplied in this message.

Note, that the order sequence number is not required in this message, and therefore allows the user to edit the details of an active order without requiring the acknowledgement from the exchange of the active order.

Name	Length	Туре	Description	Case	Example	Comment

7.11.11 Insert Report Only Spot Basis Deal – Message type 166

The Insert Report Only Spotbasis Deal Message allows a user to capture a Spot Basis Report Only trade onto the market. A few important notes are to be considered with regards to the Counter party field on this message:

- If the counterparty field is a client code. The opposite leg of this transaction will automatically be booked, and matched.
- If the counterparty field is another member code, the opposite leg of this transaction
  will automatically be booked, and sent to the counterparty if the indicator "Single Leg"
  has been set to false. In this scenario the counterparty will receive a leg which is
  equal and opposite to that which the user captured, however, the price and rate fields
  of this leg will be 0. The counterparty will need to edit the unmatched leg (Message
  Type 26) before the match will take place. This allows the counterparty and user to
  agree on the price and/or rate of the transaction.

To confirm the entry of the unmatched trade before a match takes place, the Buy Sell field can be sent with a lower case b or s. This will allow the user to first accept (Message Type 168) the trade, before the match takes place.

The exchange has a limitation on the time in which 2 legs of a reported trade should match. This is usually in the region of 6 minutes.

The message layout for this message will use the same layout as that for file type 124 Spot basis unmatched deal (see <u>section 9.5</u>5).

7.11.12 Edit Report Only Spot Basis Deal - Message type 167

• Please see <u>section 9.5</u>5 for the structure of this message. This structure is the same as the unmatched spot basis deal structure, with the unmatched sequence being the unmatched deal sequence already booked. The details captured in this message will be used to modify the existing details of the specified spot unmatched sequence.

7.11.13 Unmatched Spot Basis Deal Accept – Message type 168

The Unmatched Spot Basis Deal Accept Message allows a user to accept a specified spot basis unmatched deal record. A deal must either have a lower case Buy Sell field for it to be accepted. When an unmatched deal is accepted and matches the counterparties leg of the unmatched deal, the unmatched deal will be deleted, and the relevant deal, completed order and position updates will be received. If the unmatched has not been matched, only an update will be received.

Name	Length	Туре	Description	Case	Example	Comment
Unmatched deal Sequence number*	4	I	N	n/a	1000015	Unmatched deal sequence number of unmatched deal to be accepted
Contract Name	20	Ρ	AN	U	FG503 ALSI	Name of the contract on which the unmatched deal was booked.

Total Length: 24 Bytes

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

<u>2/11/172/11/17</u> <u>4/08/16</u>29/07/16

7.11.14 Unmatched Spot Basis Deal Assign - Message type 169

Please refer to section 9.55 for the message structure.

The Assign Sequence of this structure must be filled with the Deal Sequence of the deal which the user wants to assign.

The purpose of this message is to assign a deal leg to another member. The unmatched message structure filled for this operation should be filled with the following specific information:

- Assign Sequence This should be the Deal Sequence number of the deal which is to be assigned.
- Counterparty This should be filled with the Member Code of the counterparty to which the deal will be assigned to.

The unmatched message structure should therefore be filled with the information of the selected deal, specified by the deal sequence. The price and rate field allow the user to assign the deal at a defined price and/or rate.

The deal specified in the Assign Sequence will be updated with an Origin of Assign Send. Once the counterparty accepts the trade, new trade legs will be booked with Origin Assign Send. The message also allows for the user to specify a new reference number for the resultant trade legs.

7.11.15 Delete Spot Unmatched Deal – Message type 170

The purpose of this message is to delete a spot unmatched deal.

Name	Length	Туре	Description	Case	Example	Comment
Unmatched	4	1	Ν	n/a	3633	The unmatched
Deal						deal sequence
Sequence*						number to be
						deleted.
Contract	20	Р	AN	n/a	B00122WMAZ	Contract of

Principal Agency	1	С	A	n/a	P – Principle, A – Agency, N – None	Indicates the principle/agency indicator for the unmatched trade.
Is Accepted	1	В	N	n/a	1 – True, 0 – False	Indicates if this unmatched trade has been accepted.

Total Length: 203 Bytes

## 7.12.2 Edit an unmatched CFD trade – Message 174

This message uses the same layout as the Capture CFD trade, and the user is required to complete the sequence number of the record they wish to edit, along with the details they wish to edit on the unmatched trade.

7.12.3 Delete an unmatched CFD trade – Message 175

This message can be used to delete an unmatched CFD trade.

Name	Length	Туре	Description	Case	Example	Comment
CFD	4	Ι	N	n/a	1	Indicates the sequence
Unmatched						number for this CFD
Sequence						Unmatched record
CFD Name	30	Р	AN	U	ABL	Indicates the name of
						the CFD

Total Length: 34 Bytes.

7.12.4 Accept an unmatched CFD trade - Message 176

This message can be used to accept an unmatched CFD trade.

Name	Length	Туре	Description	Case	Example	Comment
CFD	4	Ι	N	n/a	1	Indicates the sequence
Unmatched						number for this CFD
Sequence						Unmatched record
CFD Name	30	Р	AN	U	ABL	Indicates the name of
						the CFD

Total Length: 34 Bytes.

7.12.5 Assign a CFD trade – Message 177

This message uses the same layout as the Capture CFD trade, and the user is required to complete the assign sequence of the CFD trade they wish to assign, along with the details of the counterparty they wish to assign the trade to. All the trade information should be included in this message.

Appendix K - JSE Derivatives Trading System API <u>Document.docJSE Derivatives Trading System API</u> <del>Document v2.1 rev2.doc</del>

#### 7.12.6 Allocate a CFD trade - Message 178

This message uses the same layout as the Capture CFD trade, and the user is required to complete the assign sequence of the CFD trade they wish to allocate, along with the details of the client counterparty they wish to allocate the trade to. All the trade information should be included in this message.

#### 7.12.7 Tripartite Assign - Message 179

This message uses the same layout as the Capture CFD trade. The principal must be a member, and the counter party must be a tripartite client. All trade information should be included in this message.

## 8. Output Messages

## 8.1 Session key Challenge – Message 16

The Session Key Challenge Message is returned to a user when a successful TCP socket connection is established to the system. This session key should be used in the encryption of the user's login message, and password change message.

Name	Length	Туре	Description	Case	Example	Comment
Challenge	9	P	N	N/A	54341278	The session challenge message. Received when connecting to market. The first byte indicates the length of the session key. The subsequent bytes make up the actual key to be used as part of the
						encryption process.

Total Length: 9 Bytes

## 8.2 Successful log in response – Message 1

The Successful log in message is returned to users when the user successfully authenticates to the system. This message indicates the Open and Close times of the on screen trading session and the time at which the Market will be offline.

Name	Length	Туре	Description	Case	Example	Comment
Sequence Number	4	-	Ν	N/A	11	Returned sequence of log in message
Market Open Time	4	В	N	U	11, 56, 55, 0	Time Format: Hours, Minutes, Seconds, 0
Market Close Time	4	В	N	U	11, 56, 55, 0	Time Format: Hours, Minutes, Seconds, 0
Market Offline Time	4	в	N	U	11, 56, 55, 0	Time Format: Hours, Minutes, Seconds, 0

Sell Side	1	В	Ν	N/A	True or	Indicates if this sell
Phantom					false	element is a phantom

Total Length: 38 Bytes

# \*\*Please note that if the contract is Anonymous that the length byte will be 0 followed by 4 bytes indicating the Unique member number.

Included in the message are a number of the above Depth Data messages where the number is "Number of depth" in the first part of the message.

A note on receiving Display Update Messages (Message Type 59):

- A display update message will be received with a unique global sequence number. If a 59 message is received as a result of a trade, then a further 59 message will be received as an update to a particular global sequence number. This update message will contain the latest open interest and volume figures for that contract. These are published as updates to a 59 message, and therefore may contain a global sequence number which you have already received. Any 59 messages received with a global sequence number which you have already processed should be treated as updates and processed as such. Multiple updates can be received for a particular global sequence number. For example if a trade is captured for 100 contracts, and this is made up of 5 legs of 20 contracts each, 5 updates are due to volume and open interest updates.
- The depth received on the display update message will display all orders on the order book. The top of the depth will indicate the order which is currently the best order on the market. There may however be orders at the same price going down the depth. The discretion is up to the user whether to cumulate the quantity on the top of the depth to indicate the total quantity available at that price.

Please note the following when handling display update messages on **Dividend Neutral** contracts:

- When a trade occurs on a Dividend Neutral contract Display update messages will be sent for the Dividend Neutral Contract itself, the underlying Single Stock Future Contract, and the Dividend Future Contract.
  - The following should be noted for the Dividend Neutral Contract display update messages:
  - The High, Low, Last, Last Traded Time and Volume will be updated on this contract when a trade occurs.
  - No trades will however be recorded on this particular contract itself. The above field updates are purely to indicate the market statistics on the Dividend Neutral Contract.
- 2. The following should be noted for the underlying Single Stock Future display update messages:
  - The High, Low, Volume and Open Interest will be updated when a trade occurs on the Dividend Neutral Contract.
- The following should be noted for the underlying Dividend Future display update messages:
  - The trade will be concluded at a 0 price, and would update the Low of the contract (if applicable) when a trade occurs on the Dividend Neutral Contract.
  - The volume and open interest will also update.

## 8.4 Info and Error Return Messages – Message 125

Please see section 11 for the details of the error messages. Please note that the Information and Error return message is a variable length message, which defines a variable length Message field with a maximum length of 251.

Name	Length	Туре	Description	Case	Example	Comment
Error Number	4	I	N	n/a	12	This is the error number of the associated error message.
Information or error indicator	1	В	N	n/a	1 or 0	0 – information message 1 – error message
Message	251	Ρ	AN	n/a	Fill or Kill order could not be filled	A Description of the error

Total Length: Variable length with maximum of 256 Bytes

## 8.5 Order Rejection Message – Message 126

Please see section 11 for the details of the error messages. This message is returned as a negative response to a Multi Bid message (message type 56). This indicates the order reference of the order in the multi bid message which has been rejected. Please note that the Information and Error return message is a variable length message, which defines a variable length Message field with a maximum length of 251.

Name	Length	Туре	Description	Case	Example	Comment
Error Number	4	I	N	n/a	12	This is the error number of the associated error message.
Order Reference	10	Ρ	AN	n/a	A1122322B	The order reference of the order which has been rejected.
Error Message	255	Ρ	AN	n/a	Fill or Kill order could not be filled	A Description of the error

Total Length: Variable length with maximum of 269 Bytes

## 8.6 Daily Trend Reply – Message 61

The Daily Trend Reply indicates to users what on screen trade activity has been recorded on a particular contract. The response to this message is compressed. And the decompressed data will contain the following layout. The below structure allows for up to 1000 History Suffix items. If there are more than 1000 trades captured on a particular contract, multiple Message Type 61 messages will be sent in response to the request to cater for the full range of the days trades.

Name	Length	Туре	Description	Case	Example	Comment
Contract	20	Р	AN	U	FK721	Contract code of
					ALSI	requested history
						contract
History	16*1000	History	n/a	n/a		Array of daily trend

					,0	Time Format Hours, Minutes,
						Seconds. 0

Total Length: 16 Bytes

## 8.7 Heart Beat – Message 10

A heartbeat message sent to the logged in member as simply a blank header.

## 8.8 Market Time Change – Message 140

This message indicates that a market time has changed. This message will be sent when a Market Open, Market Close Admin, and Market Offline change has occurred.

Name	Length	Туре	Description	Case	Example	Comment
Event	4	Ι	Ν	n/a	7	Please see below table for
Number						event types
Event	4	В	Ν	n/a	10, 55, 59	Time of event in Time
Time					,0	Format Hours, Minutes,
						Seconds, 0

Total Length: 8 Bytes

**Event Number Descriptions** 

Event Number	Event Description
5	Market open for trading
7	Market closed (Admin period)
8	Market offline

## 8.9 Failure Messages

In the event that the exchange system fails the following message types should be noted, and the appropriate actions taken from the user.

8.9.1 Notification of failure (Message 127)

The following message will be sent on the event of a failure of the exchange trading system, or in the event of the recovery of the exchange trading system.

Name	Length	Туре	Description	Case	Example	Comment
Failure Notice Identifier	4	Ι	N	n/a	1 – Market Shard has failed 2 – Market Shard has recovered	Identifier to identify if a market shard has failed or recovered.
Market Number	4	I	N	n/a	1 – EDM 2- APD 4 – Global	Indicates the market number on which a particular market shard has failed.
Market	4	1	Ν	n/a	1	Indicates the market

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doe

<u>2/11/17<del>2/11/17</del></u> <u>4/08/16</u>29/07/16

Shard Number					shard which has failed. This can be mapped to the Instrument Data Download to indicate which instruments are affected.
Unused	243	В	n/a	n/a	

Total Length: 255 Bytes

8.9.2 Failover recovery response (Message 37)

The failover recovery response message will be published automatically to all connected users to update their transactional data (Active Orders, Deals, Completed Orders, Positions and Unmatched) in the event of the recovery of a Market Shard, post a failure. This message can be used to update any transactional data which may have been affected by the recovery of a market shard.

The message definition is the same as the Download Data Response (Message 36), and should be processed the same. PLEASE NOTE: In the case of large data transmissions the flag "Another Set to Come" could be set to true. In this case the normal download data request message 37 should be sent by the user to retrieve the next set of data. E.g.

API Application		Exchange System
	←	Exchange systems send message type 37 with Another Set to Come set to True.
API system sends message type 37 with Re-Request flag set to True to request the next set.		<b>→</b>
	<	Exchange system replies with message type 37 with the next set of data.

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Decument v2.1 rev2.doc

<u>2/11/17<del>2/11/17</del> <u>4/08/16</u>29/07/16</u>

# 9. Download data structures

The following structures are received when downloading data. Example of this process can be found in Section  ${\bf 6}$ 

## All these Messages are compressed

## 9.1 Request Data Header – Message Type 36 and 123

Please see Section 4.7 for the handling of this message.

The Request Data Header will be attached to all 36 and 123 message received by the user. This indicates the Data Type received. For 123 messages the Specific Record and Action fields are filled to indicate the specific record received and the action to be taken.

#### 9.3 Instruments data – Number 2

The Instruments Data record defines instruments traded on a market.

The Instrument Group Sequence indicates to which group this instrument belongs to in a Series Spread Margin grouping. The Group Margin field indicates the Series Spread Margin requirement for this instrument in the Series Spread Grouping. The other instruments in this group can be determined by going to the specified record in the Group Definition data to which this instrument points to in the Instrument Group Sequence field.

The Fee details applicable to this instrument for Futures, Options and Deliveries are defined by going to the appropriate record in the Fee Data record pointed to by the Future Fee Sequence, Option Fee Sequence and Delivery Fee Sequence fields of this structure.

The market shard number will identify the market sub set on which particular contracts can be found. PLEASE NOTE: The exchange may at any time change the market shard definition of

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

#### 9.10 Completed Orders data - Number 7

The Completed Order Data indicates all orders which have been satisfied for a particular user. The Exchange Reference number of the deal which resulted is given. The quantity and price which was dealt is also given in the Quantity, Dealt Price and Dealt Rate fields. The Original Quantity field indicates the quantity of the order submitted.

#### 9.11 Deals data - Number 8

The Deals Data defines what deals have been done for a particular user. When receiving a deal entry each entry will contain an Exchange Reference Number. This identifies the deal as recorded by the exchange. This Exchange Reference number will be accompanied with an Exchange Suffix field. This Exchange Suffix field is the version of the particular exchange reference number. When the deal is initially entered the Exchange Suffix will be 0, when further deal management activity is performed on this deal, the Exchange Suffix will be incremented. The uniqueness of an Exchange reference is therefore determined by both the Exchange Reference and Exchange Suffix on the deal.

Deals created as a result of end of day operations are identified by the Exchange Reference indicator of "DELIVERY", "AUTOCLOSE", "AUTOCLOSF" or "CORPORATE". "DELIVERY" indicates a deal used to indicate a physical position on an agricultural product. These are generated during the processing of physical deliveries. "AUTOCLOSE" or "AUTOCLOSF" indicates a deal used to close out a position on a contract on future's expiry. These deals are generated during the end of day process on a futures close out day. "CORPORATE" indicates a deal used to effect a corporate action. These deals are generated during the end of day process when a corporate action is scheduled.

Underlying Contract Date Sequence	4	I	N	n/a	332	This is the sequence of the underlying date
Weight	8	D	N	n/a	242	This is the weight the underlying hold of the custom future

Total Length: 24 Bytes

# 9.22 Trace deal data – Number 64

The Trace Deal Data indicates additional detail regarding the capturing and updating of deals. Post Deal activity such as accumulations and allocations are recorded here, with the Trace Action field indicating the resultant state of a particular deal record.

Name	Length	Туре	Description	Case	Example	Comment
Audit Sequence number	4	1	N	n/a	12	The sequence number of the audit deal
Order Sequence	4	I	N	n/a		Sequence of order creating deal
Unused	8	В	n/a	n/a		
Deal Time	4	В	Ν	n/a	10, 55, 59 ,0	The time at which the deal was done
Clearing Member	6	Р	A	U	AAAAC	Data copied from orders
Member	6	Р	A	U	AAAA	Member code of logged in user
Dealer	4	Р	A	U	BAB	Dealer code of logged in user
Principal	8	Р	A	U	AAAA	Code of principal to the deal.
Buy Or Sell	1	С	A	U	B/S	Buy/Sell field of the order
Origin	1	С	AN	n/a		See 6.10 for Origin field Descriptions
Quantity	4	I	N	n/a	10	Number of contracts involved in the deal
Contract	20	Ρ	AN	n/a		Name of the contract on which the deal is done
Dealt Rate	8	D	N	n/a		The rate at which the deal was done
User Reference	10	Р	AN	n/a		Reference number to appear on deal.
Exchange Suffix	2	I	Ν	n/a		Set to 0 on first inc for div/split
Portfolio	8	Р	N	n/a		Portfolio code for the deal
Profit Centre	6	Р	A	n/a		Profit centre code for the deal

Total Length: 60 Bytes

# 9.24 Message Subscription data – Number 67

Appendix K - JSE Derivatives Trading System API Document.docJSE Derivatives Trading System API Document v2.1 rev2.doc

<u>2/11/17<del>2/11/17</del></u> <u>4/08/16</u>29/07/16

Name	Length	Туре	Description	Case	Example	Comment
Message Subscription sequence	4	1	N	n/a	12	The is the sequence of the message subscription
Member	6	Ρ	AN	U	LJBM	This is the member code for the subscription details
Dealer	4	Ρ	AN	U	DJW	This is the dealer code for which these message subscriptions apply
Message subscription message number	4	I	N	n/a	32	This is the message number for which this subscription applies
Is Subscribed	1	В	n/a	n/a	1 – True 0 – False	This indicates if the dealer is subscribed to the message
Can Change	1	В	n/a	n/a	1 – True 0 – False	The indicates if the dealer has rights to change his subscription to the message
Group Rights	1	В	n/a	n/a	1 – True 0 – False	This indicates if the group to which this dealer belongs has rights to the message.

The Message Subscription Data indicates the message subscription details for dealers of a member firm. This indicates if a particular dealer has subscribed to a particular message.

Total Length: 21 Bytes

# 9.25 Group Definition data – Number 78

The Group Definition Data defines the group setup for instruments. The Next Group Sequence points to the next level in this group. The instrument which then links to that group sequence is defined as being part of the group setup. The Next margin field indicates the margin amount applicable to the next level of grouping. For example ALSI (Instrument Seq 1 may point to Group Sequence 2, Group Sequence 2 may have a Next Group Sequence of 3, INDI Instrument Sequence 5 may point to Group Sequence 3, thus ALSI (1) and INDI (5) belong to the same group.

Name	Length	Туре	Description	Case	Example	Comment
Group	4	1	N	n/a	2355	Group Definition
Sequence						sequence of this record
Next Group Sequence	4	I	N	n/a	1225	The sequence number of the group following this Group Definition sequence number
Unused	4	В	n/a	n/a

#### 9.26 Fee data – Number 79

The Fee Data indicates the fee structure for a particular scenario. The additional sequence numbers mentioned here (Assigned, Early Leg etc) indicate further breakdown of fee amounts applicable to those further scenarios. The Fee Sequence is reference by Instruments and thus instruments have fee amounts as per the structure defined in this layout.

Name	Length	Туре	Description	Case	Example	Comment
Fee Sequence	4		N	n/a	2355	Fee sequence number
r oo ooquonoo					2000	of this record
Fee	4	1	N	n/a	1225	The sequence number
Calculation		-				of the fee calculation
Sequence						data sequence
Aggressed	4	1	N	n/a	1287	Fee Data Sequence
Sequence					-	which defines fee
						breakdown for
						aggressed transactions.
Assigned	4	1	Ν	n/a	2211	Fee Data Sequence
sequence						which defines fee
•						breakdown for
						assignment
						transactions.
Equal and	4	1	Ν	n/a	2548	Fee Data Sequence
opposite						which defines fee
sequence						breakdown for equal
						and opposite
						transactions.
Early leg	4	1	Ν	n/a	2345	Fee Data Sequence
sequence						which defines fee
number						breakdown for early leg
						transactions.
Option	4	1	Ν	n/a	457	Fee Data Sequence
Abandon						which defines fee
Sequence						breakdown for option
number						abandon transactions.
Option	4	1	Ν	n/a	457	Fee Data Sequence
Exercise						which defines fee
Sequence						breakdown for option
number						exercise transactions.
Late leg	4	1	N	n/a	456	Fee Data Sequence

Total Length: 18 Bytes

#### 9.32 Transfer Member Clearing member data – Number 85

The Transfer Member Clearing Member Data indicates the transfer of Member accounts to new Clearing Members. Included in this layout is the date the transfer is to be effected, and the New Clearing Member Sequence of the member.

Name	Length	Туре	Description	Case	Example	Comment
Transfer Clearing Member sequence	4	Ι	N	n/a	12	Sequence number of the transfer Clearing Member
Member Code	4	Ρ	AN	U	AAAA	Member code to be transferred
Original Clearing Member Code	6	Ρ	A	U	AAAAC	Clearing member code of the original clearing member.
New Clearing Member Code	6	P	A	U	BBBBC	Clearing member code of the new clearing member
Processed	1	В	Ν	n/a	1 – True 0 – False	Transaction processed
Transfer date	2	Ι	N	n/a	18764	Date on which the transfer will take place.
Transfer Margin	8	D	N	n/a	1250.00	Margin transferred when processing the transfer

Total Length: 31 Bytes

# 9.33 Physical Grade data – Number 73

The Physical Grade Data indicates the Grades applicable to Agricultural Product Instruments. These grades are used in the delivery and capturing of silo certificates.

Name	Length	Туре	Description	Case	Example	Comment
Grade	4	Ι	Ν	n/a	1	Grade Sequence
Sequence						
Instrument	4	Ι	Ν	n/a	45	Instrument sequence
Sequence						of grade

#### 9.45 Instrument Silo Accreditation data – Number 95

PLEASE NOTE: This data is on available on the Commodity Derivatives Market

This shows instruments and the accredited silo locations for these instruments..

Name	Length	Туре	Description	Case	Example	Comment
Instrument Silo Accreditation Sequence	4	I	N	n/a	5353	Sequence number for this record
Silo Location Sequence	4	I	N	n/a	10	Sequence number for the Silo Location
Instrument Sequence	4	I	N	n/a	12	Sequence number for the Instrument.
Application Date	4*3	I	N	n/a	2015,3,15	Date of the start of the accreditation
Expiry Date	4*3	I	Ν	n/a	2016,3,15	Date of the end of the accreditation
Discount	8	D	N	n/a	2.45	The discount for this accreditation.

Total Length: 55 Bytes

#### 9.46 Early Valuations Data – Number 100

PLEASE NOTE: This message is used as follows on the markets:

EDM - Early valuations published at approximately 15h00 every trading day

APD - Early valuations published approximately 12h00 every trading day for the Grain instruments.

The early valuations data indicates the mark-to-market valuations of all contracts at a time before the official closing prices are made available.

#### 9.54 Silo Certificate Spot Deals – Number 123

The Silo Certificate Deals Data defines what deals have been done for a particular user. When receiving a deal entry each entry will contain an Exchange Reference Number. This identifies the deal as recorded by the exchange.

Deals created as a result of end of day operations are identified by the Exchange Reference indicator of "DELIVERY", "AUTOCLOSE", "AUTOCLOSF", or "CORPORATE", "TRANSFER", or "LONGDELEO". "DELIVERY" indicates a deal used to indicate a physical position on an agricultural product. These are generated during the processing of physical deliveries. "AUTOCLOSE" or "AUTOCLOSF" indicates a deal used to close out a position on a contract on future's expiry. These deals are generated during the end of day process on a futures close out day. "CORPORATE" indicates a deal used to effect a corporate action. "TRANSFER" indicates client member transfers, and "LONGDELEO" indicates that a client does not have future positions to have booked the underlying spot, the deal is booked in and out to recover the future fees. These deals are generated during the end of day process when a corporate action is scheduled.

#### 9.57 Country – Number 22

This download will return country codes. This information is required for client information to indicate what country the client is a resident of.

Name	Length	Туре	Description	Case	Example	Comment
Country Sequence	4	I	N	n/a	5	Indicates the sequence number of this country record.
Country Code	4	Ρ	A	U	ZA	Indicates the country code for this country. ZA for local (South Africa)
Country Name	51	Ρ	A	n/a	South Africa	Indicates the name of the country for this country record.
VAT Amount	8	D	N	n/a	0.14	Indicates the VAT amount applicable for this country

Total Length: 67 Bytes

### 9.58 Silo Certificate Split Data – Number 127

This download will additional information to trace the splitting of silo certificates as they are split during the spot basis trading/end of day run.

Name	Length	Туре	Description	Case	Example	Comment
Silo Certificate Split Sequence	4	I	N	n/a	5	Indicates the sequence number of this record.
Original Receipt Number	4	1	N	n/a	12345	Indicates the receipt number of the original silo receipt.
Original Quantity	4	1	N	n/a	100	Indicates the original quantity on the silo receipt.
New receipt number	4	1	N	n/a	67890	Indicates the new receipt number after the split.
New Quantity	4	1	N	m/a	50	Indicates the quantity of the silo receipt after the split.

Total Length: 20 Bytes

### 9.59 Silo Position Data – Number 125

This data type will provide spot positions for the current day only to track the bids/offers as well as the number of contracts bought and sold on a spot basis contract.

Name	Length	Туре	Description	Case	Example	Comment
Member Code	6	Ρ	AN	U	AAAA	Indicates the member code on the spot position.
Principle	8	Р	AN	U	ABC123	Indicates the principle on the position.
Instrument Short Name	20	Ρ	AN	U	WMAZ	Indicates the short name of the instrument.
Location Code	11	Ρ	AN	U	ABC123EFG	Indicates the location code of the silo location
Grade Code	5	Р	AN	U	WM1	Indicates the grade code of the product grade
Origin Code	4	Ρ	AN	U	ZA	Indicates the origin code for the product origin
Unused	4	В				
Bought	4	I	N	n/a	10	Indicates the number of contracts bought
Remaining Bids	4	1	N	n/a	5	Indicates the number of active orders or unmatched trades still to be matched on this position
Quantity Remaining	4	1	N	n/a	1	Indicates the number of contracts still available on this position.
Sold	4	1	Ν	n/a	5	Indicates the number of contracts sold
Remaining Offers	4	I	N	n/a	4	Indicates the number of active orders or unmatched trades still to be matched on this position

Total Length: 78 Bytes

### 9.60 Base Rates - Number 130

This data contains the base rates available for CFD contracts.

Name	Length	Туре	Description	Case	Example	Comment
Base Rate	4	I	Ν	n/a	1	Indicates the sequence
Sequence						number for this base rate

#### 9.61 CFD Unmatched Trades – Number 131

This data downloads the current unmatched CFD trades.

Name	Length	Туре	Description	Case	Example	Comment
CFD Unmatched Sequence	4	1	N	n/a	1	Indicates the sequence number for this CFD Unmatched record
Enter Time	4	В	N	n/a	10, 5, 20, 0	Indicates the time this unmatched trade was entered.
Enter Date	3*4	1	N	n/a	2013,6,20	Indicates the date this unmatched trade was entered
Expiry Date	3*4	I	N	n/a	2013,12,20	Indicates the expiry date for the CFD
Clearing Member code	6	Р	AN	U	AAAAC	Clearing member for this unmatched trade.
Member Code	6	Р	AN	U	AAAA	Member code for this unmatched trade
Dealer Code	4	Р	AN	U	AAA	Dealer code for this unmatched trade
Principle Code	8	Р	AN	U	ABC123	Principle code for this unmatched trade
Buy Sell	1	С	A	U	B – Buy, S - Sell	Indicates if this is a buy or sell unmatched trade.
Quantity	4	1	N	n/a	10	Indicates the quantity for the unmatched trade
CFD Name	30	Р	AN	U	ABL	Indicates the name of the CFD
Base Rate Code	30	Р	AN	n/a	SABOR	Indicates the base rate specified for the CFD
Interest Spread	8	D	N	n/a	-2.5	Indicates the interest spread to be added to the base rate.
Price	8	D	N	n/a	152.45	Indicates the price of the CFD trade.
Reference Number	10	Ρ	AN	n/a	ABC12345	Indicates the user reference for the unmatched trade.
Sub Account	6	Ρ	AN	n/a	AAAAA	Indicates the sub account for the unmatched trade.
Counter Party	8	Ρ	AN	n/a	BBBB	Indicates the counterparty to the unmatched trade
Assign Sequence	4	I	N	n/a	1	Indicates the CFD deal sequence from which this unmatched trade was created from when assigning the trade.
Origin	1	С	AN	n/a	Ν	Indicates the origin of

## 10. SSF Auto Quote

### 10.1 Auto Quote Message - Message type 121

In essence, the Auto Quote component is responsible for submitting a Bid message (message type 56) on behalf of a Trader. The parameters of this Bid message are calculated by using the current Buy and Sell quantities and prices (as received via JSESETS) and the parameters provided by the Trader (see table below).

To Start Quoting on a particular contract, the user would send this message with the Buy or Sell or Double parameter indicting the users quote option. To stop quoting on a particular contract this message can be used with a Buy or Sell or Double field with N (None). *Auto Quote Trading (Private) Message* 

Name	Length	Туре	Description	Case	Example	Comment
Contract Name*	20	Ρ	AN	U	FG503 ALSI	Indicates which instrument the user would like to auto- quote on.
(B)uy Or (S)ell Or (D)ouble Or (N)one*	1	С	A	UL	В	Indicates what type of order should be submitted by the auto- quote engine. N will stop quoting on a contract.
Deals Principal*	8	P	A	U	ABC678	Indicates what principle should be used for orders submitted by the auto-quote engine.
User Reference*	10	Ρ	AN	UL	MYREF001	Indicates what reference number should be used for orders submitted by the auto-quote engine
User Dealer*	4	Ρ	A	U	XXZ	Indicates what dealer code should be used for orders submitted by the auto quote engine.
User Member*	6	Ρ	A	U	AAAA	Indicates what member code should be used for orders submitted by the auto quote engine.
Buy Interest Rate	8	D	N	n/a	2	Indicates what interest should be added for buy orders submitted by the auto quote engine
Sell Interest Rate	8	D	N	n/a	2	Indicates what interest should be added for sell orders submitted by the auto quote engine.
Dividend*	8	D	N	n/a	1	The dividend portion of the price to subtract.
Trade Fee*	8	D	N	n/a	1	Fee portion per trade to be added to price calculated by auto

### 11. Futures Close Out Iteration Minute by Minute

#### 11.0 Overview

The functionality provided by the exchange provides for the publishing of minute by minute prices of the index and the index constituents, as they are calculated during the futures close out iteration period.

These prices, together with a rolling average will then be published to users who have subscribed to receive this information. The user can select to start or stop receiving prices at any time during the futures close out iteration. The prices published will be from that minute onwards, and the average price published will be inclusive of the period already covered during the futures close out iteration, and will be up to date.

### 11.1 Subscription – Message Type 142

Users will be able to select to subscribe to the Index prices, or both the Index prices and the prices of each of the Index Constituents.

The subscription message can be used to subscribe or unsubscribe to receive futures close out prices. If the user would only like to see the values for the Index contracts they should only set the "Index Prices Subscription" field to True, and the "Index Constituent Prices Subscription" to False. At any time the user can select to stop or start receiving this information. The subscription message will be formatted as follows:

Name	Length	Туре	Description	Case	Example	Comment
Index Prices	1	В	Ν	n/a	1 – True	Indicates if you would
Subscription					0 - False	like to subscribe to
						the Index values
Index	1	В	N	n/a	1 – True	Indicates if you would

	code	specified does not exist		sent the message.
27	Not a valid member code	Member code specified is not valid, must be 4 characters long		The dealer who sent the message.
28	Not a valid clearing member code	Clearing Member code specified is not valid, must be 5 characters and end with a C		The dealer who sent the message.
29, 30	Invalid front end version	The version specified in the login message is not supported by the exchange	After sending a login message	The dealer who sent the message.
31	Dealer does not belong to member	Dealer code specified is not a dealer for this member		The dealer who sent the message.
32	Cannot book deals for other members	The member code specified is not the same member as the logged in connection.		The dealer who sent the message.
33	Invalid Principal	Principle code supplied is not valid		The dealer who sent the message.
34	Member does not belong to clearing member	Member code specified is not a member of the clearing member		The dealer who sent the message.
35	Cannot book deals for other clearing members	The clearing member code specified is not the same clearing member as the logged in connection.		The dealer who sent the message.
36	X is not a client of member	Client code specified does not belong to logged in member		The dealer who sent the message.
37	Invalid counterparty	Counterparty specified is invalid, or does not exist		The dealer who sent the message.
39	Dealer not found	Dealer specified is not a dealer of the member		The dealer who sent the message.

40	Invalid cancel	Cancel flag		The dealer who
40	flag	specified is not valid, must be 0 - 5		sent the message.
41	Invalid reference number	Reference number specified was invalid, must be 9 characters		The dealer who sent the message.
42	Instrument not found	Instrument specified does not exist		The dealer who sent the message.
43	Contract Date not found	Contract date specified does not exist		The dealer who sent the message.
44	Strike not found	Strike specified does not exist		The dealer who sent the message.
46	Dealer not a master dealer	The action specified can only be done by master dealers		The dealer who sent the message.
47	FOK/TOK order cannot be satisfied	This message indicates that a Fill or Kill, or Take or Kill order could not be satisfied, since the quantity available on the opposite side of the stack is not sufficient to satisfy the FOK or TOK execution constraint.	When a bid message is received with the FOK, or TOK flag set. The bid is validated, and if unsuccessful, the error will be returned.	The dealer who sent the bid message.
48	All or nothing not allowed	An all or nothing order was entered for a contract which does not allow all or nothing order	After sending a bid message (message type 56)	The dealer who sent the bid message.
49	Trading on this contract is closed	Each contract has an open time and a close time associated with it. If the time at which a bid or suspend message is received is before the open time, or after the close time, this message will be sent.	When a bid message or suspend/cancel message is received and the current time is outside contract open/close, then this message will be returned immediately.	The dealer who sent the bid or suspend/cancel message.
50	Order quantity below minimum	The contract has been setup with a lotsize, and the bid quantity is below this	After sending a bid (message type 56)	The dealer who sent the bid message.

51	Bid on contract was not a multiple of the lotsize	The bid was entered for a contract which was setup with a lotsize, and the quantity was not a multiple of this.	After sending a bid (message type 56)	The dealer who sent the bid message.
52	Invalid spread	Price of the spread or split order would create orders on the underlying which is invalid	After sending a bid message on a spread or split contract	The dealer who sent the bid message.
53	Odd Lots not allowed when underlying in auction	This message is sent when a bid message is received for an odd lot order, and that contract is in auction.	This message is sent when a bid message is received for an odd lot order and the contract is in auction. This error message is then returned immediately.	The dealer who sent the bid message.
54	Not allowed to change subscription	This dealer is not authorised to change subscription policy		The dealer who sent the message.
60	Limits specified must be positive	When setting limits for a dealer, the values specified can only be positive		The dealer who sent the message.
62	Principle Agency indicator is invalid	Principle Agency indicator entered was invalid. Must be either P or A		The dealer who sent the message.
63	Cannot suspend an order 1 minute before the end of Open Order Period	Cannot suspend an order after 1 minute before the end of the Open Order Period		The dealer who sent the message.
64	Spreads not allowed with underlying in auction	This message is sent when a user tries to put up a bid on a spread, or split contract, and either one of the contracts which make up the spread or split contract are in auction.	This message is sent when a bid message is received, and the underlying contract of a spread or split contract is in auction. This message is then sent immediately.	The dealer who sent the bid message.
66	Contract is suspended	The contract specified is currently suspended from trading	After sending a bid message	The dealer who sent the message.
67	Dealer code is empty	The dealer code specified was not filled in		The dealer who sent the message.
68	Incorrect price format	The price format specified is incorrect		The dealer who sent the message.

# 15. Glossary

Term	Definition		
A	Alpha only		
ACK	Acknowledgement		
AN	Alpha numeric		
В	The field is made up of 1 or more bytes of type U		
С	Single character ASCII equivalent		
D	Intel/IEEE floating point 8 byte format		
FF	Hex for 255		
FOK	Fill or Kill		
	Intel Integer format; the length is defined		
LZH	Compressed file format		
JSE DERIVATIVES MARKETS TRADING SYSTEM REPLACEMENT	Multiple Instrument Trading System		
MTM	Market to Market		
N Numeric only - Default for types I.U.I			
NACK	Negative Acknowledgement		
NOB	Number of bids		
Ρ	Pascal type string with leading length byte, maximum length is the defined length – 1. All strings in JSE DERIVATIVES MARKETS TRADING SYSTEM REPLACEMENT are represented in this manner		
TCP / IP	Transmission Control Protocol / Internet Protocol		
ТОК	Take or Kill		
U	Intel unsigned integer; the length is defined		
URL	Uniform Resource Locator		
XOR	Mathematical term for exclusive disjunction		
Information Subscriber	Those entities which will be subscribing to the public data for their own use, and onward redistribution to their external clients.
