1 INTRODUCTION TO DISSEMINATION

BDA dissemination data is used in a number of business operations within JSE Equity member firms. The data made available within the BDA dissemination download, is grouped to ensure where possible, relevant data is kept together. This is achieved by grouping data into different Card Codes. This makes it easier for users to know what data is contained in which card codes as different business operations within JSE Equity member firms require different sets of data. Apart from the different sets of data, end users also require data to be separated into different file i.e. the ability to download data in different files. E.g. end users require General Ledger to be separated from other BDA disseminated data. This is achieved by allocating a specific dataset (file) for General Ledger data.

BDA dissemination downloads can be scheduled by users who have the relevant access, as part of the BDA end of day batch process. This can be scheduled using the BDA on-line function RPROC.

In certain instances, users can decide to download a full set of data each day, or depending on the nature of the data, users can download only the changes.

BDA dissemination data can e.g. be used for:

- Importing client holdings and cash balances into trading systems to allow for Pre Trade Risk management
- Creating IT3(b) and IT3(c) files to SARS
- Balance BDA general ledger transactions and balances to in house systems
- Balance sub ledger holdings, open positions and cash balances to in house systems
- Balance Securities Lending and Borrowing transactions where users use external systems

BDA data can be disseminated to JSE Equity members firms and/or their service providers.

4 DOWNLOADING DATA

4.1 Scheduling the Download

The participating Broker must schedule the process DISSEM on RPROC when data is to be downloaded. Multiple requests can be entered. Each request can be tailored to the Brokers daily requirements as follows:

BRANCH/PARTNER CODES	Brokers branch or partner code If left blank, all branch and main office data will be downloaded for all partners.
PF IND/FATCA/FUPD/AC7 PF IND	See detail below: Portfolio indicator If set to 'Y', only portfolio clients' detail will be downloaded If set to 'N', only non-portfolio detail will be downloaded If left blank, all clients' detail will be downloaded
FATCA	'Y' to download FATCA details, 'N' to disregard FATCA details
FUPD	Download only updated FATCA records. FATCA parameter must also be set to 'N'
AC7	If set to Y, new and updated records from record Layout 70 (BEMNT) will be downloaded

Important to note:

Please note that due to the DISSEM screen in RPROC being aligned to the left, values of "Y" or "N" inserted in the FATCA field will move to the PF IND field if the PF IND is left blank.

To overcome this, please ensure that if your intention is to leave the PF IND field blank, so as to receive records for both portfolio and non-portfolio clients, the PF IND field must be populated with a hyphen

NOTE: The BRANCH /PARTNER CODES and PF IND are the highest order of selection. Other selections are within these primary selections.

If UP (Updated records only) are required, the flags for layout 80/85/86/77/78/98 must be set as NNNNNYYY.

6 ELECTIVE EVENTS DOWNLOAD

6.1 Download of Elective Events Frozen File

The new upload function will allow members to load new instructions and change instructions already submitted. This new upload facility will not cater for members to delete an existing election instruction or where members may want to add a new position onto the frozen files. Where members want to delete or add, they will have to update these directly on the frozen files via the existing B5ACICS online system.

In order to assist members with the automation of clients elections, a new dissemination file containing all the information as per the frozen files in B5ACICS, will be created. Then, using the data off the download file, members can create an upload file with all the relevant client elections to be processed on B5ACICS. Using the download file is optional as members may have different ways to automate their client instructions.

6.1.1 Setup of Email addresses

For both the Upload and Download files a once off set up, unless an email has changed, of email addresses is required. Response to each request, download or upload would be posted to these addresses. It should be noted that the positive as well as the negative responses would be posted.

Members can load the relevant e-mail address or multiple e-mail addresses to which the responses must be e-mailed to via the function T.EML against the relevant Process Type. A maximum of 999 e-mail addresses can be set up.

The following Process Type is required for responses to be received via email.

Download	→ ELECDN
Upload	→ ELECUP

Each new e-mail address would require a new sequence number (i.e. SEQ of 001, the suffix of ELECDN, displayed below).

Example of Download:

```

6.1.2 Access to the dataset

Members can use their existing sign-ons currently used for existing uploads (E.g. FINONL or ALLOC) or downloads (for daily dissemination downloads) to FTP the new datasets from and to the mainframe.

If no sign-ons exist, a new one should be requested.

Access should be given to the following datasets:

- | | |
|------------------|--|
| For the Download | a) read access for the dataset BBAP.SPRD.DOWNLOAD.XXX.ELEC, the 'XXX' depicting the relevant 2 or 3 character broker alpha code, |
| For the Upload | a) update access for the dataset BBAP.SPRD.UPLOAD.XXX.ELEC, the 'XXX' depicting the relevant 2 or 3 character broker alpha code
b) read access for the dataset BBAP.SPRD.UPLOAD.XXX.ELEC.SYYYYYYY, the 'XXX' depicting the relevant 2 or 3 character broker alpha code. The 'S' is the prefix of the 7 byte sequence number as passed on the header record. |

6.1.3 Facility to Download a Frozen File via RPROC on BDA

Members will be able to download details in the frozen file for all elective events real-time or batch. This file can be used as a basis for the election upload file. This new dissemination file will be a separate download file from the normal BDA Dissemination downloads process as members will be able to request and retrieve the downloaded files during the online day or overnight.

Members will be able to request for the frozen file positions from LDT + 1 up until EOD LDR, if necessary. The first download requested will download all the client accounts, Loan and Collateral positions. Thereafter if any further downloads are requested, then only the amended positions will be downloaded.

The proposed solution is that members will download the frozen file from BDA, update their election option codes and once they have completed their elections, send an upload file back to the JSE which will then update the frozen positions on B5ACICS with the relevant client election instructions.

6.1.4 Download via RPROC

A Member will be able to request an Election download on BDA via RPROC by selecting Process Code – ELECDN – CA Election Download. It is critical to ensure that when requesting a download file for the frozen positions, frozen positions for the correct corporate action event is requested.

The following fields are mandatory to be completed by the member:

- RUN FREQUENCY - the run frequency of '*', for adhoc run
- INSTRUMENT ALPHA
- INSTRUMENT VERSION
- PROCESS TYPE
- PROCESS SEQ

The correct PROCESS TYPE and PROCESS SEQ information is available on the B5ACICS on-line screen BRHDR – Broker Header Maintenance.

To ensure users are notified once the file is available for members to download, an email response will be sent to the members. See point 5.3 on further information regarding update of email address for the ELECDN. This would be a once-off set up of e-mail addresses for any downloads requested.

The downloaded records will reside on the mainframe on the dataset BBAP.SPRD.DOWNLOAD.XXX.ELEC, the 'XXX' depicting the relevant 2 or 3 character broker alpha code. This Dataset can be fetched from the mainframe by the brokers as is currently done for their BDA dissemination files. The download file to be retrieved will be the same name for all the events requested. **Due to the fact that requests can be done online and would be serviced immediately, as opposed to waiting overnight, multiple requests would need to be done individually i.e. once a request has been submitted, the file would need to be downloaded by the members and thereafter the next request can be submitted for the next file to be populated which can be downloaded by the member.**

If the download was not successful, the reason can be found on the on-line screen COMPR or on the report PCOMPR with error format code of 'ELEC'. Note that the PCOMPR is a batch report and therefore the reason will only be available the following day.
